AWS Weekly Roundup: AI/ML Scholars Program, Agent Plugin for Serverless

AWS announced the 2026 AI & ML Scholars program offering free AI education to up to 100,000 learners worldwide. Additionally, Amazon Aurora PostgreSQL received express configuration for rapid two-click database setup and the Agent Plugin for AWS Serverless was introduced to enhance development using AI coding assistants. AWS also unveiled visual customization for the Management Console.

Partnership AWS 2026-03-30

TGS Names AWS as Preferred Cloud Provider for Energy Exploration

TGS announced a strategic multi-year partnership with AWS, designating it as their preferred cloud provider for revolutionizing energy exploration. The collaboration leverages AWS high-performance computing, elastic cloud infrastructure, and generative AI technologies to modernize seismic imaging platforms. TGS is developing a multi-modal Subsurface Foundation Model on AWS to enhance geological understanding.

Research Akamai 2026-03-30

EMEA Web Attacks Hit Two-Year High, Akamai Report Warns

Akamai published a new threat report revealing that web attacks in the EMEA region have reached a two-year high, with a 36% increase in attack volumes year-over-year. The report highlights a 104% global increase in application-layer DDoS attacks over two years, with APIs identified as a key vulnerability—87% of organizations experienced API-related security incidents. Sectors like retail and manufacturing are heavily targeted, with EMEA now the most attacked region for DDoS.

Product Launch Barracuda Networks 2026-03-30

Barracuda Advances BarracudaONE Platform and Partner Program

Barracuda Networks announced major updates to its BarracudaONE cybersecurity platform including expanded email protection for Google Workspace, a new cloud-delivered SecureEdge Access for network security, and AI security features for monitoring and controlling generative AI usage. The company also modernized its Partner Success Program with unified tiering, new incentives, and certification updates.

Research | Barracuda Networks | 2026-03-30

Barracuda Managed XDR Report: 90% of Ransomware Exploits Firewall Vulnerabilities

Barracuda released its Managed XDR Global Threat Report revealing that 90% of ransomware incidents exploited firewall vulnerabilities through unpatched systems or compromised accounts. The report found attackers frequently misuse common tools like ScreenConnect, RDP, and PowerShell for lateral movement. Supply chain risks increased significantly, with 66% of incidents involving third-party vendors, up from 45% previously.

Research | Check Point Software | 2026-03-30

Check Point Research Discovers ChatGPT Data Exfiltration via DNS Side Channel

Check Point Research published findings on a critical security vulnerability in ChatGPT's code execution environment that allowed data exfiltration through a hidden DNS outbound channel. The flaw enabled malicious prompts to silently leak sensitive user data including conversations and uploaded files. OpenAI patched the issue on February 20, 2026, but the discovery highlights risks for regulated industries using AI services.

Check Point Weekly Threat Intelligence Report: FBI Director Gmail Breach

Check Point Research's weekly Threat Intelligence Report highlighted major cyber incidents including a breach by Iranian state-affiliated group Handala Hack compromising the FBI director's personal Gmail. The report also covered a ransomware attack on Spain's Port of Vigo, a cyberattack on the Dutch Ministry of Finance, and an $80M DeFi theft from Resolv. Additionally, it warned of a supply chain compromise of the LiteLLM Python library harvesting API keys.

Partnership | Cisco | 2026-03-30

Cisco Extends Enterprise Agreement to Include Nutanix for Flexible Infrastructure

Cisco announced the extension of its Enterprise Agreement (EA) to include Nutanix, offering a more adaptable buying framework for organizations modernizing their infrastructure. The approach allows organizations to start small, expand over time, and shift value within their software portfolio without renegotiations, supporting continuous modernization in the age of AI and virtualization.

Security Advisory | Citrix (NetScaler) | 2026-03-30

Critical NetScaler CVE-2026-3055 Vulnerability Actively Exploited

Citrix disclosed a critical vulnerability (CVE-2026-3055, CVSS 9.3) in NetScaler ADC and Gateway affecting SAML identity provider configurations. The flaw involves multiple memory overread bugs that allow attackers to extract session tokens, credentials, and sensitive data without authentication. Active exploitation has been observed since March 27, with the UK's NCSC urging immediate patching of affected deployments.

Product Launch | Cloudflare | 2026-03-30

Cloudflare Client-Side Security Now Open to All Users

Cloudflare expanded its Client-Side Security features, making advanced protection accessible to all customers including self-serve plans. The update introduces Client-Side Security Advanced (formerly Page Shield) with ML-powered detection of malicious JavaScript, real-time code change monitoring, and proactive blocking rules. Domain-based threat intelligence is now available free for all users on the basic bundle.

Acquisition CrowdStrike 2026-03-30

CrowdStrike to Acquire Identity Security Company SGNL

CrowdStrike announced its plan to acquire SGNL, an Austin-based identity security company, to enhance next-generation identity protection capabilities within the Falcon platform. The acquisition will enable real-time, risk-based access management for human users, non-human identities, and AI agents across SaaS applications and cloud environments.

Security Advisory Fortinet 2026-03-30

Critical FortiClient EMS Vulnerability Under Active Exploitation

Fortinet issued a critical security advisory for CVE-2026-21643, a SQL injection vulnerability (CVSS 9.1) in FortiClient EMS version 7.4.4. The flaw allows remote unauthenticated attackers to execute arbitrary commands via crafted HTTP requests. Nearly 1,000 vulnerable instances are publicly exposed, with active exploitation observed since March 26. A fix is available in version 7.4.5.

Product Launch | HPE / Juniper Networks | 2026-03-30

HPE Showcases New PTX Series Routers with Juniper Express 5 ASICs

HPE announced new PTX series routers powered by custom Juniper Express 5 ASICs delivering up to 500 Tbps switching capacity with 49% improved power efficiency. The routers support scalable, modular configurations for data center interconnects and long-haul AI networks, facilitating high-throughput GPU communication with minimal packet loss. HPE also introduced the compact PTX10002 for large-scale AI fabric deployments.

Product Launch | Palo Alto Networks | 2026-03-30

Palo Alto Networks Launches Prisma Browser for Business with Agentic AI Security

Palo Alto Networks unveiled Prisma Browser for Business, a secure browser designed for SMBs that enables users to leverage Agentic AI while maintaining cybersecurity protection. The browser defends against threats like shadow AI, prompt injection, and agent hijacking, transforming the web into a secure AI-driven workspace. It serves as a primary secure workspace for small businesses addressing the rising risks associated with AI application usage in browsers.
