Check Point Brings AI Security to Amazon Bedrock AgentCore

Check Point Software detailed an integration with Amazon Bedrock AgentCore to secure enterprise AI agent workloads built on AWS. It delivers AI behavioral monitoring for destructive or misaligned agent actions, AI-native guardrails against prompt injection and unsafe content, plus DLP and content-inspection signals that feed AgentCore policy. AgentCore enforces at the gateway — outside the agent's reasoning loop — enabling deterministic allow/deny decisions on every agent action. The move extends Check Point's controls into agentic AI workflows as enterprises scale AI adoption.

Recognition

Palo Alto Networks

2026-06-26

Palo Alto Networks Named a Leader in 2026 IDC MarketScape for Worldwide SIEM

Palo Alto Networks was named a Leader in the IDC MarketScape for Worldwide SIEM Platforms 2026 — its first appearance in this evaluation. The recognition spotlights Cortex XSIAM as central to the company's

vision of shifting security operations from a traditional SIEM toward an automated, AI-driven 'active command center.' The placement reinforces Palo Alto's platformization strategy in SecOps, positioning Cortex XSIAM against legacy SIEM incumbents as enterprises consolidate detection, investigation, and response onto a single unified platform.
