Idira Identity Security Platform Achieves FedRAMP High Authorization

Palo Alto Networks earned FedRAMP High Authorization for its Idira Identity Security Platform, enabling SaaS-delivered privileged access management for U.S. federal agencies via the FedRAMP Marketplace. Aligned with NIST SP 800-53 controls, Idira supports zero-trust and cloud modernization across hybrid and multicloud environments, complementing existing FedRAMP High offerings such as Endpoint Privilege Manager and Workforce Identity.

THREAT RESEARCH

Palo Alto Networks

2026-06-08

Palo Alto Networks Warns Direct-to-IP Connections Create Security Blind Spot

In a June 8 report, Palo Alto Networks disclosed that attackers increasingly communicate directly with IP addresses rather than domains or URLs, letting malicious traffic blend with normal internet activity. Notably, 52% of IPs involved in direct-to-IP connections were absent from open-source intelligence feeds commonly used to track malicious infrastructure, signaling a significant visibility gap for traditional domain-focused detection.

PRODUCT EXPANSION**Fortinet**

2026-06-08

Fortinet Launches FortiNDR Cloud Point-of-Presence in Singapore

Fortinet opened a FortiNDR Cloud Point-of-Presence in Singapore to bring network detection and response capabilities closer to customers across ASEAN and Asia-Pacific, improving performance, operational efficiency, and regional compliance. FortiNDR Cloud uses AI-based analytics, behavioral detection, and FortiGuard threat intelligence across on-premises, cloud, hybrid, IoT, and OT environments, with natural-language guidance and retrospective threat hunting of up to 365 days.

PARTNERSHIP**CrowdStrike**

2026-06-08

CrowdStrike and Zscaler Bring Continuous Identity Security to Zero Trust Access

CrowdStrike and Zscaler unveiled a forthcoming integration feeding CrowdStrike Falcon Next-Gen Identity Security risk signals into Zscaler's Adaptive Access Engine for real-time, risk-based access decisions across the Zero Trust Exchange. Using open standards (OpenID SSF and CAEP), Zscaler automatically adjusts access policies when high risk is detected, restricting lateral movement and restoring access once risk is mitigated, deepening the vendors' unified cross-domain defense partnership.

Zscaler Partners with Radiant Logic to Solve M&A Identity and Deliver Day 1 Access

Zscaler announced a strategic partnership with Radiant Logic combining RadiantOne's unified identity data fabric with the Zscaler Zero Trust Exchange to deliver true Day 1, least-privilege access during mergers and acquisitions. Targeted at healthcare, the integration gives acquired employees immediate identity-based access to apps such as Epic, Oracle Health, and Meditech without VPNs or IP overlaps, while preserving HIPAA minimum-necessary access and 405(d) HICP practices.

SECURITY ADVISORY**Check Point Software**

2026-06-08

Check Point Issues Emergency Fix for Actively Exploited VPN Zero-Day (CVE-2026-50751)

Check Point released an emergency hotfix for CVE-2026-50751, a critical authentication-bypass flaw in Remote Access VPN and Mobile Access deployments using deprecated IKEv1, exploited in the wild since early May including by a Qilin ransomware affiliate. The certificate-validation flaw lets attackers establish VPN connections without credentials. A related flaw, CVE-2026-50752, could enable man-in-the-middle attacks. Check Point published mitigations and indicators of compromise and is notifying affected customers.

PRODUCT LAUNCH**Cloudflare**

2026-06-08

Cloudflare Turns Threat Indicators into Real-Time WAF Rules

Cloudflare announced WAF integration of live Cloudforce One threat intelligence, letting customers block known malicious actors before they reach infrastructure. New cf.intel fields expose threat-actor names, target industries, attack types, and countries to the rule engine, executing in microseconds with constant-time lookups distributed across Cloudflare's global network. Rules can be built via dashboard, API, and Terraform, with one-click creation from the Threat Events view. Available to Cloudforce One subscribers.

AWS Releases Next-Generation Amazon OpenSearch Serverless for AI Workloads

AWS announced general availability of the next-generation Amazon OpenSearch Serverless, delivering 20x faster resource provisioning, true scale-to-zero, and up to 60% lower cost at peak versus provisioned clusters. Positioned for agentic AI workloads, it adds native integrations with AI dev tools (Cursor, Kiro, Claude Code, Codex), OpenSearch Agent Skills, a shared storage layer decoupling compute from storage, and new per-account regional and PrivateLink VPC endpoints.

AWS Introduces Agentic Shopping Assistant for Retailers

AWS launched the Agentic Shopping Assistant, an AI tool letting retailers build branded conversational shopping experiences using their own data. Built on Amazon Bedrock, AgentCore, and OpenSearch and developed with the AWS Generative AI Innovation Center, it provides architecture, starter code, and expert support to deploy customized AI shopping interfaces in roughly 60 days. Kate Spade is piloting the solution with its AI Gift Concierge, extending Amazon's internal retail AI technology to external enterprises.

PRODUCT UPDATE**AWS**

2026-06-08

Amazon Connect Adds AI Agent Trace Details for Self-Service Voice

AWS announced that Amazon Connect now provides AI agent trace details for self-service voice interactions, giving full visibility into how AI agents reason, act, and respond within each conversation. Step-by-step traces displayed alongside transcripts help teams diagnose issues, validate behavior, and deploy reliable agentic experiences by surfacing flawed reasoning, bad tool-call parameters, or timeouts. The capability is available in all regions where Amazon Connect AI Agents are supported.

RESEARCH**Fastly**

2026-06-08

Fastly Research Finds AI Traffic Growing 6.5x Faster Than Human Traffic

Fastly published research showing AI-generated traffic is now a distinct, rapidly growing layer of internet activity, with AI requests up about 30% from January to May 2026, roughly 6.5x faster than human traffic. It distinguishes AI crawlers from AI fetchers, noting over 50% of AI requests require origin access versus under 9% for humans. Fastly urges a three-part machine-traffic strategy of visibility, context, and intent-based responses delivered at the edge.

PRODUCT LAUNCH**Arista Networks**

2026-06-08

Arista Launches 1.6T 7060XE7 Series for Rack-Scale AI Fabrics

Arista Networks introduced the 7060XE7 Series, a 1.6 Tb/s networking platform built as the foundation for rack-scale AI infrastructure. Based on Broadcom Tomahawk 6 silicon and running Arista EOS, it delivers up to 100 Tbps system bandwidth with Linear Pluggable Optics that cut interconnect power by roughly 60%, supporting air, liquid, and hybrid cooling. Models scale to 128x800G ports, with availability from Q4 2026 into Q1 2027 and AMD compute-silicon integration.
