PARTNERSHIP

Palo Alto Networks

2026-06-23

Wipro Expands Palo Alto Networks Partnership for AI-Powered MDR

Wipro expanded its partnership with Palo Alto Networks to deliver AI-powered Managed Detection and Response (MDR) services. The joint offering combines Palo Alto's Cortex XSIAM platform with Wipro's CyberShield, Cyber Defense Centers and SOC GURU framework, plus the WEGA and WINGS AI delivery platforms. The goal is faster, AI-driven threat detection and response, reduced analyst noise, tool consolidation and lower cost, moving detection from days to minutes for joint customers.

PRODUCT UPDATE

Palo Alto Networks

2026-06-23

Palo Alto Networks Details OT Defense Against Frontier AI-Powered Attacks

Palo Alto Networks outlined a governance-driven approach to protecting OT environments from frontier AI-powered attacks, blending operational risk prioritization with AI-powered virtual patching delivered through OT Device Security and the NGFW. The approach moves beyond CVSS to incorporate CISA KEV, EPSS and weaponization signals plus OT-specific context, discovers all connected devices, and auto-generates enforceable inline protections, enabling immediate defense against accelerating AI-driven vulnerability discovery.

PRODUCT LAUNCH**Fortinet**

2026-06-23

Fortinet Launches FortiSOC, a Unified SOC Platform Powered by Agentic AI

Fortinet announced the availability of FortiSOC, a unified, cloud-delivered security operations center platform bundling SIEM, SOAR, threat intelligence and behavioral/identity threat detection into a single SaaS experience. It uses agentic AI, including FortiAI-Assist with autonomous investigations, AI-generated playbooks and MCP-based workflows, to investigate and correlate alerts then recommend or execute responses under analyst oversight. FortiSOC integrates natively with the Fortinet Security Fabric and FortiGuard Labs intelligence to reduce tool sprawl and boost analyst productivity.

AWARD/RECOGNITION**CrowdStrike**

2026-06-23

CrowdStrike Named a Leader in the 2026 IDC MarketScape for Worldwide SIEM

CrowdStrike announced it was named a Leader in the 2026 IDC MarketScape: Worldwide SIEM Vendor Assessment, crediting its Falcon Next-Gen SIEM. The platform integrates endpoint, identity, cloud and exposure data on Falcon, with Charlotte AI triaging alerts, correlating telemetry and automating investigations at machine speed. CrowdStrike highlighted surpassing \$600 million in ending ARR for Next-Gen SIEM, no re-ingest fees, and the September 2025 Onum acquisition powering its data routing layer.

BUSINESS**Zscaler**

2026-06-23

Zscaler Lands Major Healthcare Win and Joins Nasdaq-100

Zscaler reported momentum signals across cybersecurity and AI infrastructure, including addition to the Nasdaq-100 and Alger Russell Innovation indexes. The company secured one of its largest Zero Trust Branch deployments in healthcare, expanding into a highly regulated sector, and announced new partnerships with Gigamon and Oasis Security to extend Zero Trust across cloud, endpoint and third-party access. The developments mark concrete milestones for Zscaler's Zero Trust platform strategy.

<https://ca.finance.yahoo.com/news/zscaler-zs-lands-major-healthcare-101448575.html>

ANNOUNCEMENT**Cloudflare**

2026-06-23

Cloudflare Marks Post-Quantum Milestone Following Federal Executive Order

Cloudflare highlighted a pivotal post-quantum milestone tied to Executive Order 14409, which sets 2030-2031 federal timelines to adopt post-quantum encryption and authentication. Cloudflare noted its own full post-quantum target of 2029, with over two-thirds of its browser traffic already protected by post-quantum key exchange and Cloudflare One supporting post-quantum encryption across TLS, MASQUE and IPsec. The company framed the EO as reinforcing work underway since 2019 and a roadmap for others to accelerate migration.

PRODUCT UPDATE**AWS**

2026-06-23

Amazon CloudWatch Logs Adds Managed Syslog Ingestion

AWS announced that Amazon CloudWatch Logs now supports managed syslog ingestion, letting customers send syslog messages (RFC 5424/3164 and Cisco FTD/ASA formats) directly to CloudWatch Logs via TCP, TCP+TLS or UDP to a VPC endpoint without any agents. CloudWatch automatically parses messages to extract fields like facility, severity, hostname and application name, enabling centralized log visibility, easier security investigations and streamlined operations. It is available in all commercial AWS Regions except UAE, Bahrain and Tel Aviv.

AWARD/RECOGNITION**Barracuda Networks**

2026-06-23

BarracudaONE Named Best Unified Cybersecurity Platform; Adds AI Email Protection

Barracuda's BarracudaONE platform was named Best Unified Cybersecurity Platform at The Hacker News 2026 Cybersecurity Stars Awards. The recognition spotlights its integrated approach across email, data, networks, applications, identity and endpoints with 24/7 managed SOC and integrated XDR. Barracuda also tied in its new AI-powered Integrated Email Protection (ICES) for Microsoft 365 and Google Workspace, featuring autonomous, full-lifecycle detection, post-delivery clawback and explainable verdicts via the Bailey AI assistant, after research showed AI phishing can compromise accounts in five minutes.

ACQUISITION**Cisco**

2026-06-23

Cisco to Acquire WideField Security to Advance Agentic AI Security

Cisco announced plans to acquire WideField Security to boost agentic AI security and strengthen its Agentic SOC capabilities. Integrated with Splunk, WideField normalizes and correlates identity, session and activity telemetry from multiple sources, enabling context across human, non-human and AI-agent activity using signals including Cisco Identity Intelligence. The move helps distinguish legitimate versus malicious actions in fast-paced AI environments and deepens Cisco Data Fabric, expanding agentic security offerings following recent additions like Astrix Security and Galileo.

PARTNERSHIP**CrowdStrike**

2026-06-23

Presidio Joins CrowdStrike's Project QuiltWorks for Frontier AI Risk

Presidio announced its participation in CrowdStrike's Project QuiltWorks, aimed at closing the gap between frontier AI vulnerability discovery and remediation. The collaboration connects vulnerability insights with validated remediation, underwriting action and risk protection. QuiltWorks unites frontier AI labs, system integrators, cyber insurance and cloud infrastructure to assess, prioritize, remediate and financially mitigate frontier AI risk. Presidio will help enterprises accelerate remediation and improve resilience by building on its cybersecurity practice and partner ecosystem.

<https://www.globenewswire.com/news-release/2026/06/23/3316003/0/en/Presidio-Joins-CrowdStrike-s-Project-QuiltWorks-Closing-the-Gap-Between-Frontier-AI-Vulnerability-Discovery-and-Remediation-for-Enterprises.html>

PARTNERSHIP**Zscaler**

2026-06-23

Zscaler and AWS Join Forces to Secure GenAI Across Regulated Sectors

Zscaler and AWS announced a Strategic Collaboration Agreement to securely scale generative AI across government, healthcare and education. The partnership combines Zscaler's Zero Trust Exchange with AWS GenAI tools including Amazon Bedrock and SageMaker, integrating inline security controls with cloud-native AI infrastructure to enable safe production deployment. Planned workstreams include joint integrations, reference architectures, go-to-market activities, customer workshops and pilots that provide production-ready, security-first GenAI blueprints as deployments move from pilot to production.

<https://www.zscaler.com/blogs/partner/zscaler-and-aws-join-forces-secure-genai-across-government-healthcare-and-education>

PARTNERSHIP**Check Point Software**

2026-06-23

Check Point Embeds OpenAI Frontier Models in Live Customer Defenses

Check Point became one of the first security vendors to embed OpenAI Frontier models directly into live customer defenses, joining OpenAI's Daybreak Cyber Partner Program. The integration moves frontier-grade AI from research into active security workflows, with two initial deployment areas: Agentic Network Security Orchestration for intent-to-policy translation, and CTEM Agentic Exposure Validation for faster vulnerability validation and remediation drafting. The companies are jointly developing a responsible AI deployment framework with abuse-prevention controls and a monitored, graduated rollout.

<https://www.itsecurityguru.org/2026/06/23/check-point-becomes-one-of-first-security-vendors-to-embed-openai-frontier-models-in-live-customer-defences/>

PRODUCT UPDATE**AWS**

2026-06-23

Amazon Bedrock Guardrails Adds Automated Policy Refinement Workflows

AWS announced two new automated policy refinement workflows for Automated Reasoning checks in Amazon Bedrock Guardrails. An iterative policy improvement workflow suggests changes so a policy passes natural-language tests, while an ambiguity reduction workflow automatically refines variable descriptions and type definitions to reduce ambiguous translations. Automated Reasoning checks use formal logic to validate generative AI outputs against defined policies, helping detect hallucinations and provide verifiable explanations, improving guardrail reliability with less manual effort across supported AWS Regions.

<https://aws.amazon.com/about-aws/whats-new/2026/06/amazon-bedrock-guardrails/>

ACQUISITION**A10 Networks**

2026-06-23

A10 Networks Completes TrojAI Acquisition to Build Sovereign AI Security

A10 Networks completed its acquisition of TrojAI to build a comprehensive Sovereign AI Security platform. The integration pairs A10's hardware-based AI firewall with TrojAI's software-based pre-deployment red teaming (TrojAI Detect) and runtime protection (TrojAI Defend) for models, agents and applications, including MCP workflows. The combination secures AI across on-premises, cloud and hybrid environments while preserving data sovereignty, improving visibility into agent behavior, data access and tool usage. A10 expects no material impact to fiscal 2026 results.

<https://en.mashdigi.com/seizing-the-opportunity-in-sovereign-ai-security-a10-networks-acquires-trojai-jointly-creating-a-comprehensive-ai-firewall-covering-both-models-and-agents/>

PRODUCT ANNOUNCEMENT**HPE / Juniper Networks** 2026-06-23

HPE Unifies Juniper and Aruba Under AI-Native Networking Vision

At HPE Discover, HPE Networking's Rami Rahim argued legacy static networks cannot withstand AI's speed and complexity, unveiling a converged AI-native strategy across Aruba Central, Mist and Juniper/Aruba driven by a common AI engine (Marvis) and an agentic AI framework. Demos showed Marvis autonomously fixing network congestion without human intervention. HPE detailed dual-platform AP shipments, a unified SASE orchestrator combining EdgeConnect SD-WAN with SSE, and a new AI-aware firewall to govern AI usage across self-driving networks.

<https://www.networkworld.com/article/4188404/rami-rahims-message-for-network-pros-legacy-networks-cant-withstand-rigors-of-ai.html>

PRODUCT LAUNCH**Fastly** 2026-06-23

Fastly C++ SDK for Edge Compute Is Now Generally Available

Fastly announced that its C++ SDK for Fastly Compute at the edge is generally available, bringing native C++ performance to edge computing via WebAssembly. It enables legacy code reuse, low-latency gaming logic and access to the broader C++ ecosystem, with memory safety through Wasm sandboxing and polyglot interoperability. Highlighted use cases include rehosting legacy code, edge-enabled gaming features like low-latency server selection and matchmaking, and agentic systems requiring robust C++ tooling, complemented by Fastly Object Storage and Image Optimizer.

<https://www.fastly.com/blog/fastly-c-sdk-is-now-generally-available>

PRODUCT UPDATE**Cloudflare** 2026-06-23

Cloudflare WAF Update Blocks Critical Ivanti Sentry Command Injection

Cloudflare released a WAF update adding new managed protection to mitigate a critical pre-authentication OS command injection vulnerability in Ivanti Sentry (CVE-2026-10520). The Ivanti Sentry command-injection rule in the Cloudflare Managed Ruleset had its action upgraded from Log to Block, stopping exploitation attempts for protected customers automatically.

RESEARCH REPORT**Radware** 2026-06-23

Radware 2026 E-Commerce Bot Threat Report: Bad Bots Hit 43% of Holiday Traffic

Radware released its 2026 E-Commerce Bot Threat Report, finding bad bots accounted for 43% of holiday e-commerce traffic in 2025, nearing the 46% from human shoppers and up from 31% a year earlier. The rise of malicious automation is driven by generative AI, with nearly 70% of bad bot traffic classified as low sophistication. Account takeovers, carding and fake registrations surged at a large retailer, and AI training crawlers made up over half of observed AI crawler activity.

<https://www.stocktitan.net/news/RDWR/radware-finds-bad-bots-account-for-43-of-holiday-shopping-traffic-sdljhxclivil.html>
