Fortinet Introduces FortiOS 8.0 with Secure AI Controls, Fabric-Based AI Agents, Flexible SASE, and Simplified SD-WAN

At Fortinet Accelerate 2026, Fortinet unveiled FortiOS 8.0, a major release advancing Secure Networking with AI-driven security controls, Fabric-Based AI Agents, next-generation SASE, simplified SD-WAN, and quantum-safe capabilities. The release aims to simplify security architectures across hybrid environments while ensuring consistent protection and performance from the data center to the modern edge as enterprises scale AI workloads.

Fortinet Advances Security Operations Platform with Unified SOC, Agentic AI, and Expanded Endpoint Security

Fortinet announced major Accelerate 2026 innovations across its Security Operations Platform. Highlights include agentic AI across the SecOps stack (expanding FortiAI with agentized workflows for alert triage and threat hunting), a preview of FortiSOC merging FortiAnalyzer, FortiSIEM, FortiSOAR, and FortiTIP into a single cloud-delivered service, and an expanded FortiEndpoint that unifies ZTNA, SASE, EPP, EDR, and DLP under one agent with AI application visibility and control.

Cisco Talos Introduces EvidenceForge: Open-Source Synthetic Security Logs

Cisco Talos announced EvidenceForge, an open-source project providing realistic synthetic security logs for research and testing. The tool features a single canonical event model, causal ordering, realistic background noise, and AI-assisted scenario authoring. Datasets are synchronized across 20+ log formats covering Windows, Linux, network, and EDR telemetry, with ground truth documentation and analyst briefings to support detection engineering and security research.

Cisco Launches 9th Annual Global Partner Innovation Challenge 2026 with \$1M Prize Pool

Cisco opened submissions for its 9th Annual Global Partner Innovation Challenge 2026, with a total prize pool of \$1 million. The breakdown includes a \$250,000 Global Grand Prize, \$100,000 for second place, \$50,000 for third, \$300,000 across APJC regional winners, a \$200,000 Cisco & Splunk Powering Digital Resilience Award, and \$100,000 for Partnering for Purpose categories. Submissions are open until September 4, 2026, with winners announced at Cisco Partner Summit in October.

Cisco Research Finds Standard AI Safety Benchmarks Miss the Real Threat

Cisco's AI Threat Intelligence and Security Research team warns that standard AI safety benchmarks understate risk in frontier models. Testing 15 closed/proprietary models from OpenAI, Anthropic, Google, Amazon, and xAI across 30,090 single-turn prompts and 6,986 multi-turn attacks, researchers found multi-turn attack success rates of 7.89%-88.30% versus 2.19%-64.91% for single-turn. Eight of 15 models showed gaps exceeding 15 points, urging enterprises to adopt multi-turn adversarial testing.

Cisco Plans to Bring SONiC to Enterprises with Nexus 9000 Integration

Cisco announced plans to extend the open-source SONiC network operating system to its Nexus 9000 switches for all customers, not just hyperscalers. SONiC will run on Cisco Cloud Scale and Silicon One silicon, with potential NVIDIA Spectrum-X Ethernet AI fabric support, integrated with Nexus Dashboard for monitoring and automation. Analysts project SONiC-related data-center switching revenue to approach \$8B by 2027, signaling broader enterprise adoption of open networking for AI/ML workloads.

Qumulo and Cisco Launch Bridge-to-Cloud Architecture Ahead of Cisco Live 2026

Qumulo and Cisco unveiled a Bridge-to-Cloud architecture that extends on-premises file workloads from Cisco UCS into the cloud without migration or refactoring. The solution, CNQ Enterprise with Cloud Data Fabric, runs on Cisco UCS on-prem and extends to AWS, Azure, Google Cloud, and OCI, enabling hybrid capacity relief and AI-ready data platforms. It addresses flash shortages and long hardware lead times by allowing immediate cloud extension while preserving existing workflows and performance.

2026-05-27

CrowdStrike, Google, and Shadowserver Disrupt Glassworm Botnet Targeting Open-Source Supply Chain

CrowdStrike, with Google and Shadowserver, disrupted the Glassworm botnet that has targeted open-source software developers since early 2025. The takedown dismantled four attacker-controlled C2 channels that leveraged Solana blockchain, BitTorrent, Google Calendar, and commercial VPS hosting, cutting access to infected machines and forcing the Russia-linked group to rebuild. Glassworm trojanized VSCode extensions, npm and Python packages, and poisoned 300+ GitHub repositories. CrowdStrike published IOCs to aid defenders.

CrowdStrike Named a Leader in 2026 Gartner Magic Quadrant for Endpoint Protection for Seventh Consecutive Time

CrowdStrike was named a Leader in the 2026 Gartner Magic Quadrant for Endpoint Protection for the seventh consecutive year, positioned furthest right for Completeness of Vision and highest for Ability to Execute among all vendors for the fourth straight year. The company highlighted its AI-native approach, with real-time on-endpoint enforcement and expanded protection across AI applications, agents, infrastructure, SaaS, and live browser sessions as AI agents increasingly operate with system-level privileges.

CrowdStrike Announces Claude Compliance API Integration for Unified AI Governance

CrowdStrike unveiled an integration with Anthropic's Claude Compliance API that connects Claude activity to Falcon Next-Gen SIEM and Charlotte Agentic SOAR. The integration lets security teams unify AI signals with existing platform data to enable detection, response, and governance at scale, correlating Claude usage with identity and data movement signals. Falcon security policies can be applied to AI-related signals, bringing AI activity into the same operational view as endpoints, identities, and cloud workloads.

EARNINGS**Zscaler**

2026-05-27

Zscaler Shares Drop Sharply After Q3 Beat Overshadowed by FY27 Guidance Cut

Zscaler shares fell approximately 21-30% on May 27, 2026 following its Q3 fiscal 2026 results. Despite beating expectations with revenue of \$850.5M (+25% YoY), ARR of \$3.53B, and adjusted EPS of \$1.08, the company cut full-year free cash flow margin guidance to 22.8-23.3% (from 26.5-27%) due to higher capex on AI/data-center hardware. Preliminary FY27 guidance of 16-17% growth (below 20%+ expectations) was attributed to sales leadership departures.

Check Point Launches Agentic Exposure Validation to Counter Exploits

Check Point Software announced Agentic Exposure Validation (AEV), a new capability within Check Point Exposure Management that uses AI agents to reason like attackers to determine which vulnerabilities are truly exploitable. AEV provides evidence and remediation guidance for Continuous Threat Exposure Management (CTEM) programs. The launch extends Check Point's AI-focused security push, following recent releases including the AI Defense Plane, AI Factory Security Blueprint, and Secure AI Advisory Service tied to the Infinity platform.

Check Point Frontier AI Models Readiness Program Delivers Jumbo Security Release

Check Point published a security update detailing its Frontier AI Models Readiness Program, a proactive effort to stay ahead of AI-driven threats. The Jumbo Security Release includes AI-driven code scanning, security reviews, component hardening, and accelerated patching. It addresses multiple CVE fixes (CVE-2026-48131 through CVE-2026-48136) with high or moderate severities and no active exploitation. The release showcases BLAST (Business Logic Application Security Testing), an internal AI-driven framework for validating vulnerabilities.

Check Point 2026 Cloud Security Report Reveals 51-Point AI Security Gap

Check Point's 2026 Cloud Security Report, based on 1,042 professionals, finds a widening gap between AI adoption and security readiness. While 77% of organizations updated security strategies for AI, only 26% have architecture to enforce them. Only 5% fully understand which AI tools employees use, 54% confirmed an AI-related incident in the past year, and only 24% can fully inspect AI traffic without performance impact. Just 13% can block malicious prompts.

2026-05-27

Cloudflare Lays Off 1,100 Employees as CEO Cites AI-Era Restructuring

Cloudflare announced a 20% workforce reduction (about 1,100 employees) framed as an AI-driven restructuring rather than a financial slowdown. CEO Matthew Prince, in a Wall Street Journal op-ed with COO Michelle Zatlyn, said cuts target 'measurers' in internal audit, finance, legal, compliance, and middle management while continuing to hire 'builders' (engineers) and 'sellers.' The company projects \$140-\$150M in Q2 severance costs and emphasized strong Q1 revenue of \$639.8M as context.

Cloudflare Launches Flagship Native Feature Flag Service for Developers

Cloudflare announced Flagship, a native feature flag service integrated with Cloudflare Workers that lets developers control feature visibility without redeploying code. Flagship offers a native Workers binding for type-safe flag checks with automatic default fallbacks, eliminating extra HTTP calls. It supports sophisticated targeting rules, percentage-based rollouts, A/B testing, audit history, and is OpenFeature-compatible (CNCf standard). Configurations are backed by Workers KV and Durable Objects for low-latency global evaluation.

Cloudflare Radar: Iran's Internet Partially Restored After Three-Month Shutdown

Cloudflare Radar data shows Iran's internet was partially restored beginning around 11:00 UTC on May 26, 2026, after nearly three months of shutdown. Cloudflare observed a 15x rise in data transfer versus the prior week, concentrated in Tehran (91.6% of HTTP requests), with corresponding spikes in DNS queries to the 1.1.1.1 resolver. IPv6 traffic remains effectively zero while IPv4 announcements stayed stable, suggesting the shutdown used application filtering rather than route removal.

AWS Launches Agentic Shopping Assistant to Bring Alexa-for-Shopping Tech to Retailers

AWS announced the Agentic Shopping Assistant (ASA), an AI retail solution that brings the foundation of Amazon's Alexa for Shopping (Rufus) to outside retailers. Built on Amazon Bedrock and Bedrock AgentCore with OpenSearch for product retrieval, ASA enables retailers to deploy AI-powered shopping assistants in about 60 days while retaining control of customer data, catalogs, and business rules. Early customer Kate Spade (Tapestry) launched an AI Gift Concierge built on Anthropic Haiku 4.5.

2026-05-27

AWS Launches Graviton-Powered Redshift RG Instances with Up to 7x Query Speedup

AWS announced Redshift RG instances powered by Graviton Arm CPUs, delivering up to 7x faster query processing versus the previous generation and roughly 2.2x faster than RA3, with about 30% lower cost per vCPU. A new query engine supports SQL across Redshift warehouses and external data lakes (Apache Iceberg, Apache Parquet) from a single execution layer, reducing data movement and benefiting AI workloads through faster iterative query loops and lower analytics costs.

SECURITY ADVISORY**Citrix (NetScaler)**

2026-05-27

NetScaler ADC and NetScaler Gateway Security Bulletin for CVE-2026-3055 and CVE-2026-4368

Citrix published a security bulletin on May 27, 2026 addressing two NetScaler ADC and NetScaler Gateway vulnerabilities: CVE-2026-3055 (insufficient input validation causing memory overread when configured as a SAML IdP, CVSS 9.3) and CVE-2026-4368 (race condition causing user session mix-up, affecting only build 14.1-66.54). Affected customers are urged to upgrade to fixed builds including 14.1-60.58+, 13.1-62.23+, and FIPS/NDcPP 13.1-37.262+. Citrix-managed cloud services have already been updated separately.

INDUSTRY NEWS**Radware**

2026-05-27

Radware Reports Results of 2026 Annual General Meeting

Radware (NASDAQ: RDWR) announced on May 27, 2026 that all three shareholder proposals presented at its 2026 Annual General Meeting, held May 25, 2026 in Tel Aviv, were adopted by the requisite shareholder vote. The company filed a Form 6-K with the AGM results, reaffirming continuity in corporate governance as Radware continues executing its cybersecurity and application delivery growth strategy for multi-cloud environments.

Barracuda SOC Threat Radar — May 2026

Barracuda Networks published its May 2026 SOC Threat Radar on May 27, highlighting rising threats observed by Barracuda Managed XDR. Key findings include a surge in malicious Microsoft 365 logins using VPNs and rapidly changing low-risk IPs (notably from the UK and US), a fake Claude AI installer delivering multi-stage malware that enables credential theft and persistence, and clipboard-based fileless malware that executes via PowerShell in memory to evade disk-based detection. The report emphasizes attackers increasingly designing techniques to appear normal or trusted.
