FORTINET

2026-05-20

Fortinet Introduces FortiOS 8.0 with Secure AI Controls, Fabric-Based AI Agents, Flexible SASE, and Simplified SD-WAN

At Fortinet Accelerate 2026, Fortinet launched FortiOS 8.0, the latest evolution of its Security Fabric operating system. The release expands secure networking with AI-driven security controls, fabric-based AI agents, quantum-safe capabilities, next-generation SASE, and simplified SD-WAN. The update aims to unify protection across the entire digital footprint, improving performance and security for organizations adopting AI and hybrid environments.

PRODUCT LAUNCH

FORTINET

2026-05-20

Fortinet Expands FortiGate G Series with 3500G and 400G to Secure AI from Data Center to Enterprise Edges

Fortinet introduced the FortiGate 3500G and FortiGate 400G at Accelerate 2026, expanding the G Series with ASIC-accelerated firewalls powered by NP7 and SP5 processors and FortiOS 8.0. The platforms deliver hardware-enforced security for AI-driven workloads across data centers, cloud, and edge, with native shadow AI detection, FortiGuard AI-powered services, and unified Security Fabric management to reduce tool sprawl and TCO.

SOURCE: <https://www.fortinet.com/corporate/about-us/newsroom/press-releases/2026/fortinet-expands-fortigate-g-series-to-secure-ai-from-data-center-to-modern-enterprise-edges>

PRODUCT LAUNCH**FORTINET****2026-05-20**

Fortinet Advances Security Operations Platform with Unified SOC, Agentic AI, and Expanded Endpoint Security

Fortinet unveiled a unified, AI-powered Security Operations platform anchored by FortiSOC, a cloud-delivered service combining FortiAnalyzer, FortiSIEM, FortiSOAR, and FortiTIP. The announcement expands agentic AI across FortiAI products for automated alert triage, investigation, and threat hunting. FortiEndpoint adds single-agent unification for ZTNA, SASE, EPP, EDR, and DLP with AI app visibility and control, reducing agent sprawl across the Security Fabric.

SOURCE: <https://www.fortinet.com/corporate/about-us/newsroom/press-releases/2026/fortinet-advances-its-security-operations-platform-with-unified-soc-agentic-ai-and-expanded-endpoint-security>

SECURITY RESEARCH**FORTINET****2026-05-20**

FortiGuard Labs Publishes P2Pinfect Kubernetes Compromise Research

FortiGuard Labs released research detailing the P2Pinfect botnet campaign that compromised Google Kubernetes Engine clusters via exposed Redis instances. The report describes long dwell times, dormant phases, beaconing behavior detected through FortiCNAPP Composite Alerts, and overlap of indicators across affected customers. Fortinet highlights how a single cloud misconfiguration enables persistent Kubernetes compromise and recommends FortiCNAPP, FortiGate, FortiClient, FortiEDR, and IP reputation services for defense.

SECURITY RESEARCH**CISCO****2026-05-20**

Cisco Patches Four Critical Flaws in Identity Services Engine and Webex Platforms

Cisco disclosed and patched four critical vulnerabilities across its Identity Services Engine (ISE) and Webex platforms. CVE-2026-20184 is a Webex SSO flaw that could allow user impersonation through trusted cloud authentication. CVEs 2026-20147, 2026-20180, and 2026-20186 affect ISE and could let attackers execute arbitrary commands with potential root privileges. Cisco reports no observed active exploitation but urges customers to apply patches promptly to prevent denial-of-service or full system compromise.

STRATEGIC ANNOUNCEMENT**CROWDSTRIKE****2026-05-20**

CrowdStrike Named Overall Champion in Omdia 2026 Cybersecurity Platform Ecosystems Leadership Matrix

CrowdStrike was named Overall Champion in Omdia's 2026 Cybersecurity Platform Ecosystems Leadership Matrix, positioned highest and furthest to the right among 24 vendors. Omdia cited Falcon's platform-led ecosystem, Next-Gen SIEM and MSSP momentum (MSSP TCV exceeding \$1.3B over three years), hyperscaler marketplace scale (AWS approaching \$1.5B in FY26), expanded GSI partnerships, Falcon Flex consumption, and the Charlotte AI AgentWorks ecosystem for partner-built security agents.

PARTNERSHIP

CROWDSTRIKE

2026-05-20

CrowdStrike and SVA Partner to Power Next Phase of Cybersecurity Growth in Germany

CrowdStrike announced a strategic partnership with SVA System Vertrieb Alexander GmbH to deliver the AI-native Falcon platform to public sector, enterprise, and mid-market customers across Germany. SVA will standardize on Falcon for architecture design, deployment, and managed services to consolidate cybersecurity tools and reduce sprawl. The agreement includes joint go-to-market efforts through AWS Marketplace, STACKIT, and Google Cloud Marketplace to accelerate Falcon adoption in the German market.

CrowdStrike Celebrates Partner Award Winners at 2026 Europe Partner Symposium

At its 2026 Europe Partner Symposium, CrowdStrike announced its Europe Partner of the Year Awards, recognizing partners driving Falcon adoption across the region where MSSP partnerships have generated over \$1.3 billion in total contract value over three years. Winners included Softcat (Europe Partner of the Year), Accenture (GSI of the Year), BT (Innovation Partner), Deutsche Telekom Security (MSSP of the Year), and Zscaler (Ecosystem Partner of the Year), with Accenture and Telefónica Tech launching Charlotte AI AgentWorks.

PARTNERSHIP

ZSCALER

2026-05-20

IGEL and Zscaler Release Healthcare Security Blueprints for Distributed Care Delivery

Announced at HIMSS26 Europe in Copenhagen, IGEL and Zscaler released joint Healthcare Security Blueprints providing architectural guidance for securing distributed care delivery. The blueprints combine IGEL's immutable endpoint OS, UMS, and App Portal with Zscaler's Zero Trust Exchange to enable identity- and policy-based access. They target three use cases: secure access to isolated recovery environments during cyber disruption, standardized security across distributed clinics, and secure remote clinician access, reducing PHI exposure and dependence on VPN-centric access.

PRODUCT LAUNCH

CHECK POINT SOFTWARE

2026-05-20

Check Point Launches Agentic Network Security Orchestration Platform

Check Point unveiled its Agentic Network Security Orchestration Platform, an autonomous agent architecture that shifts network security management from manual, rule-based processes to AI-driven, intent-based execution. The platform uses a proprietary Network Knowledge Graph and live environment modeling to ground agent decisions, with human-defined business intent and auditable execution traces. Policy Auditor, Policy Insights, and AI Assist are generally available; Playblocks Agents are in Early Availability, with broader multi-vendor support planned for H2 2026.

ACQUISITION

CHECK POINT SOFTWARE

2026-05-20

Check Point to Acquire Deepchecks to Validate AI-Driven Security Actions

Check Point announced plans to acquire Tel Aviv-based AI validation startup Deepchecks (reportedly for \$10-20M) to embed evaluation, observability, testing, and monitoring of agentic workflows across its portfolio. Deepchecks specializes in validating that AI agents and models avoid hallucinations and produce trustworthy outputs in mission-critical security tasks. The acquisition accelerates Check Point's autonomous security strategy and marks its fourth Israeli startup buy in 2026, following Cyclops Security, Cyata, and Rotate.

PARTNERSHIP**CLOUDFLARE****2026-05-20**

Cloudflare and Anthropic Launch Cloudflare Environments for Claude Managed Agents

Cloudflare and Anthropic announced Cloudflare Environments for Claude Managed Agents, letting developers run Claude-managed agent loops within Cloudflare's global network and Workers platform. The integration provides secure, scalable per-session sandboxes (Linux micro-VMs or V8 isolates), zero-trust data protection, post-quantum-ready encryption, and private connections via Cloudflare Mesh to internal services. The offering targets safe, large-scale enterprise AI agent deployments with low latency, built-in compliance controls, and rapid global scaling from prototype to millions of users.

SOURCE: <https://www.businesswire.com/news/home/20260519244010/de>

SECURITY RESEARCH**CLOUDFLARE****2026-05-20**

Cloudflare Warns Anthropic's Mythos AI Can Weaponize Minor Bugs into Multi-Stage Cyberattacks

Cloudflare published security research on Anthropic's Mythos Preview, warning the model can autonomously chain multiple low-severity software bugs into multi-stage exploits. In testing across 50+ Cloudflare code repositories, Mythos closed entire vulnerability chains unaided, surpassing other frontier LLMs. Cloudflare flags that the model's internal guardrails are inconsistent and unpredictable, sometimes refusing or altering vulnerability-related responses. The dual-use risk is central: the same capabilities that help defenders identify bugs could dramatically accelerate offensive cyber operations if misused.

PRODUCT LAUNCH**AWS****2026-05-20**

AWS Security Hub Extended Expands to 21 Curated Partner Solutions Across 9 Categories

AWS announced expansion of Security Hub Extended to 21 curated partner solutions spanning nine security categories, adding SentinelOne, CyberArk, Sublime, Varonis, LayerX, Native Security, and Zenity. The plan offers pay-as-you-go pricing, a single AWS bill, EDP eligibility, unified Level 1 support, and no long-term commitments. Findings are emitted in OCSF and aggregated in Security Hub for integrated risk detection across endpoint, identity, email, network, data, browser, cloud, AI, and SecOps. Available in all commercial AWS regions where Security Hub is offered.

PRODUCT LAUNCH**AWS****2026-05-20**

AWS Local Zone Now Generally Available in Istanbul, Türkiye

AWS announced general availability of a new AWS Local Zone in Istanbul, Türkiye (eu-central-1-ist-1a), bringing compute, storage, and networking closer to end users for single-digit-millisecond latency and data residency. Supported services include EC2 (C7i, M7i, R7i), S3 One Zone-IA, EBS Local Snapshots, ECS, EKS, VPC, Direct Connect, and Application Load Balancer. Customers can enable the zone via the EC2 console or the ModifyAvailabilityZoneGroup API.

SOURCE: <https://aws.amazon.com/about-aws/whats-new/2026/05/aws-local-zones-istanbul-turkiye/>

PRODUCT LAUNCH**AWS****2026-05-20**

AWS Announces OpenAI-Compatible API Support for Amazon SageMaker AI Endpoints

AWS announced OpenAI-compatible API support for Amazon SageMaker AI real-time inference endpoints. A new /openai/v1 path exposes Chat Completions (including streaming) callable from the OpenAI SDK, LangChain, and Strands Agents with no client rewrites. Endpoints support bearer-token authentication generated via the SageMaker Python SDK, with token lifetimes up to 12 hours. Customers can reuse existing OpenAI-compatible code while running inference on dedicated SageMaker AI endpoints with full control over model versions, data residency, and scaling.

PRODUCT LAUNCH**AWS****2026-05-20**

AWS Announces Agent Toolkit for AWS to Help AI Coding Agents Build Effectively on AWS

AWS launched the Agent Toolkit for AWS, a production-ready suite for AI coding agents building on AWS with fewer errors, lower token costs, and enterprise-grade security. The toolkit includes 40+ agent skills for IaC, storage, analytics, serverless, containers, and AI services; a generally available AWS MCP Server with IAM guardrails, CloudWatch/CloudTrail observability, and sandboxed execution; and agent plugins for AWS Core, Data Analytics, and Bedrock AgentCore integration. Initially available in US East (N. Virginia) and Europe (Frankfurt) at no additional charge.

SOURCE: <https://aws.amazon.com/about-aws/whats-new/2026/05/agent-toolkit/>

SECURITY RESEARCH**HIDDENLAYER****2026-05-20**

HiddenLayer Discloses Unpatched ChromaDB 'ChromaToast' Vulnerability Enabling Full Server Takeover

HiddenLayer researchers publicly disclosed CVE-2026-45829, nicknamed 'ChromaToast,' a critical unpatched pre-authentication remote code execution flaw in ChromaDB affecting all versions $\geq 1.0.0$. The flaw allows unauthenticated attackers to trigger code execution by supplying a crafted HuggingFace model identifier, exposing API keys, secrets, environment variables and enabling full server takeover. Roughly 73% of exposed deployments are at risk. With no official patch as of ChromaDB 1.5.8, HiddenLayer urges restricting network access, isolating deployments, and monitoring suspicious outbound traffic until proper authentication checks are implemented before configuration loading.

SOURCE: <https://www.cxodigitalpulse.com/unpatched-chromadb-vulnerability-could-allow-full-server-takeover/>

PRODUCT LAUNCH**OPERANT AI****2026-05-20**

Operant AI Launches Agent ScopeGuard and AI Infrastructure Ecosystem Partnership Program at RSAC 2026

At RSAC 2026, Operant AI unveiled Agent ScopeGuard, a new capability inside Agent Protector that enforces runtime operational boundaries for AI agents by evaluating every action against per-agent scope policies in real time using GPU-accelerated processing, blocking out-of-scope actions before execution. Policies define allowed data sources, APIs, workflows, and data types. Operant also announced the AI Infrastructure Ecosystem Partnership Program, designed to integrate Operant's runtime AI security capabilities directly into the inference stacks of AI infrastructure providers, extending agentic protection across the broader ecosystem.

SECURITY RESEARCH**PILLAR SECURITY****2026-05-20**

Pillar Security Discloses 'TrustIssues' CVSS 10 Vulnerability in Google Gemini CLI Workflows

Pillar Security publicly disclosed 'TrustIssues,' a CVSS 10 supply-chain vulnerability affecting Google's AI-powered GitHub workflows for Gemini CLI. The flaw allowed an external attacker with only a public GitHub issue to fully compromise the gemini-cli repository supply chain. Pillar notified Google on April 16-17, 2026; Google issued advisory GHSA-wpqr-6v78-jr5g on April 24, patching run-gemini-cli 0.1.22 and Gemini CLI 0.39.1/0.40.0-preview.3, enforcing tool allowlisting even in --yolo mode, and strengthening command sanitization to block prompt injection in headless agentic environments.

SOURCE: <https://www.pillar.security/blog/my-agentic-trust-issues-from-prompt-injection-to-supply-chain-compromise-on-gemini-cli>

PRODUCT LAUNCH**PILLAR SECURITY****2026-05-20**

Pillar Security Launches Pillar for AI Coding Agents

Pillar Security announced Pillar for AI Coding Agents, a unified security solution that discovers and secures AI coding agents across the enterprise—including Claude Code, Cursor, Codex, Antigravity, GitHub Copilot, and OpenClaw—on workstations and endpoints. The platform delivers end-to-end visibility into agents, permission scopes, MCP server connections, and credential exposure; pre-runtime hardening of configurations and policies; runtime detection of prompt injection, tool poisoning, and data exfiltration; and shadow AI discovery. Generally available now, it extends Pillar's coverage from cloud and app layers to endpoints with audit-ready documentation.

SOURCE: <https://www.pillar.security/blog/introducing-pillar-for-ai-coding-agents>

PRODUCT LAUNCH**PILLAR SECURITY****2026-05-20**

Pillar Security Introduces Pillar for Agentic CI/CD

Pillar Security launched Pillar Agentic CI/CD, extending its AI-agent security platform into CI/CD pipelines. The release includes Discovery and Posture Management, which scans pipeline configurations across source-control platforms to identify embedded AI agents and classifies risks against the SAIL framework with remediation guidance mapped to OWASP and MITRE ATLAS. It also extends the Pillar Runtime Agent to CI/CD build runners to enforce continuous posture, detecting and blocking out-of-policy actions such as unauthorized secret access, outbound network calls, protected-branch pushes, credential harvesting, and gateway-bypassing API calls.

SOURCE: <https://www.pillar.security/blog/introducing-pillar-for-agentic-ci-cd>

SECURITY RESEARCH**AKAMAI****2026-05-20**

Akamai Warns of Record Surge in AI-Driven DDoS and API Attacks Against Financial Services

Akamai released State of the Internet research showing financial services faced 2.41 billion DDoS attacks in 2025 — the highest of any industry — with median Layer 3/4 attack durations up 738% and maximum attack sizes up 236% YoY. AI-enabled botnets like TurboMirai and Aisuru drove multi-terabit attacks, while 96% of financial institutions reported at least one API security incident in the past year. Advanced bot activity rose ~150% in late 2025, and pro-Iran hacktivist activity correlated with a 245% jump in regional attacks.

SOURCE: <https://www.govinfosecurity.com/ai-botnets-drive-surge-in-financial-sector-ddos-attacks-a-31730>

PRODUCT LAUNCH**AKAMAI****2026-05-20**

Akamai Launches AI Brand Presence to Optimize Edge Delivery for LLM and AI Agent Traffic

Akamai introduced AI Brand Presence, an edge-based service that automatically reformats site content for LLMs and AI agents, delivers AI-ready context at the edge, and monitors AI bot activity with integrated security. Internal pilot results cited a 99% reduction in machine-processing data loads, 85% increase in citations, 364% rise in general-brand presence, and 133% gain in ChatGPT visibility versus competitors. AI bot traffic on Akamai-protected sites grew over 300% YoY. The product is rolling out in phases starting in North America.

SOURCE: <https://martech360.com/news/media-growth/akamai-launches-ai-brand-presence-to-strengthen-visibility-in-ai-search-and-agentic-discovery/>

PRODUCT LAUNCH**FASTLY****2026-05-20**

Fastly Unveils DDoS Attack Insights to Strengthen Protection and Security Transparency

Fastly announced enhancements to its DDoS Protection with new Attack Insights capabilities that provide real-time visibility into DDoS events and the mitigation actions being applied. The features give security teams ongoing visibility into attack behavior and how mitigation rules are enforced, enabling them to validate defenses and better protect applications and APIs in real time. Attack Insights is available now to Fastly DDoS Protection customers and can be enabled from the control panel.

EARNINGS**A10 NETWORKS****2026-05-20**

A10 Networks Earnings Call Highlights AI-Fueled Growth and Major AI Infrastructure Customer Win

On its May 20, 2026 earnings call, A10 Networks detailed Q1 FY2026 results of \$75.0M revenue (up 13.4% YoY) and adjusted EBITDA of \$22.5M (~30% of revenue). Management highlighted a significant AI infrastructure customer win representing roughly 5% of quarterly revenue as evidence of accelerating AI data center demand for secure application services. A10 reaffirmed 2026 guidance of 10-12% revenue growth, 28-30% adjusted EBITDA margins, and 12-14% EPS growth.

SOURCE: <https://www.tipranks.com/news/company-announcements/a10-networks-earnings-call-highlights-ai-fueled-growth>

PRODUCT LAUNCH**ARISTA NETWORKS****2026-05-20**

Arista Networks Named a Leader in 2026 Gartner Magic Quadrant for Enterprise Wired and Wireless LAN

Arista announced it was positioned as a Leader in Gartner's 2026 Magic Quadrant for Enterprise Wired and Wireless LAN. The company expanded its Cognitive Campus portfolio with ruggedized 710HXP-series switches for industrial environments and new internal directional-antenna Wi-Fi APs (C460D indoor, O435D outdoor) supporting 6 GHz without AFC. Arista also evolved AVA (Autonomous Virtual Assist) into a multi-domain agentic AIOps platform that correlates wired, wireless, NAC, and data center telemetry for closed-loop, human-in-the-loop remediation to reduce MTTR.

SOURCE: <https://www.arista.com/en/company/news/press-release>

PRODUCT LAUNCH**HPE / JUNIPER NETWORKS****2026-05-20**

HPE Expands Secure, AI-Native Networking Portfolio Integrating Aruba Central with Juniper Mist

HPE expanded its AI-native networking portfolio, unifying HPE Aruba Networking Central with HPE Juniper Networking Mist via a shared agentic AI/microservices framework for self-driving operations. New hardware includes the HPE Juniper Networking QFX5250 — the first OEM switch using Broadcom Tomahawk 6 silicon at 102.4 Tbps for Ultra Ethernet AI fabrics — and the MX301 multiservice edge router delivering 1.6 Tbps and 400G for AI inference at the edge. HPE Financial Services added 0% financing for networking AIOps software including Mist.

SOURCE: <https://eurobusinessproducts.co.uk/blogs/news/hpe-accelerates-ai-infrastructure-leadership-with-expanded-secure-ai-native-networking-portfolio>

PRODUCT LAUNCH**HPE / JUNIPER NETWORKS****2026-05-20**

HPE Showcases 'Complete' Secure Networking Portfolio at RSA with Juniper SRX400 Firewalls and AI Governance

At RSA Conference 2026, HPE announced its secure networking portfolio is now 'complete' following Juniper integration, debuting the HPE Juniper Networking SRX400 Series Firewalls — the smallest form factor in the line — for remote sites and space-constrained deployments. The release adds hardware-rooted tamper protections, new AI governance features for the hybrid mesh firewall, and AI-powered enhancements extending protection from cloud to core to edge. SRX400 firewalls and the AI governance features are slated for Q2 2026 availability, alongside expanded HPE Threat Labs telemetry.

SOURCE: <https://www.crn.com/news/networking/2026/hpe-showcases-complete-secure-networking-portfolio-at-rsa-with-juniper-firewalls-ai-upgrades>

PARTNERSHIP**BARRACUDA NETWORKS****2026-05-20**

Barracuda Collaborates with CyberCert to Simplify SMB1001 Compliance Certification for Australian and New Zealand SMBs

Barracuda Networks announced a collaboration with CyberCert to make SMB1001 cybersecurity certification more affordable and accessible for SMBs in Australia and New Zealand. MSPs using the BarracudaONE platform can now bundle SMB1001 certification packages covering email security, network/remote access protection (firewall, SASE), data protection and recoverability, and managed EDR. Barracuda is providing sponsored CyberCert Certification Credits to offset onboarding costs and reduce the complexity and cost of achieving recognized compliance standards alongside BarracudaONE's protections.

SOURCE: <https://www.cyberdaily.au/security/13625-barracuda-partners-with-cybercert-to-simplify-smb1001-compliance-for-australian-smes>

SECURITY RESEARCH**BARRACUDA NETWORKS****2026-05-20**

Barracuda Survey: Security Exceptions Are Increasing Cybersecurity Risk

Barracuda published research finding that every one of 200 surveyed U.S. cybersecurity leaders granted at least one security or compliance exception in the past 12 months — 63% formal and 36% informal workarounds. Many exceptions become permanent, undermining governance and creating hidden risk. The survey also found exceptions are delaying or canceling business initiatives including market expansion, product launches, M&A activity, and AI deployments. Barracuda warns the trend reflects a culture prioritizing speed over security policy and urges stronger governance.

SOURCE: <https://blog.barracuda.com/2026/05/20/security-exceptions-cybersecurity-risk>
