Product Update

Palo Alto Networks

2026-06-11

Cortex Frontier AI SOC Adds Native Frontier-Model Support

Palo Alto Networks announced native support for frontier AI models within its Cortex platform, integrating Anthropic Claude Sonnet 4.6, Claude Opus 4.8, and Gemini 3.5 Flash across XSIAM, AgentiX, XDR, and Cloud components to boost AI reasoning, speed, and workflow intelligence. The Cortex harness is built to rapidly add new models as they emerge. The capability is in private preview now, with general availability planned for Q4 FY26.

Security Update

Palo Alto Networks

2026-06-11

Palo Alto Networks and Splunk Patch Severe Cortex Vulnerabilities

Palo Alto Networks issued patches addressing multiple vulnerabilities across its products. A high-severity flaw in Cortex XSOAR and Cortex XSIAM (CVE-2026-0274) involving improper credential validation in the Commvault SecurityIQ integration could let attackers access and modify restricted resources. Eight additional medium-to-low severity defects were fixed across PAN-OS, Prisma Access Agent, Cortex XSOAR, and GlobalProtect App. The company reported no known exploitation in the wild at disclosure.

Fortinet Launches Singapore NDR Cloud PoP for ASEAN

Fortinet launched a Singapore-based Network Detection and Response (NDR) cloud Point of Presence to strengthen threat detection and response across the ASEAN region. The new PoP expands Fortinet's NDR cloud capabilities, improving monitoring, analytics, and faster threat visibility for customers in Southeast Asia. The move aims to enhance cloud and network security coverage amid rising regional demand.

Security Update**Fortinet**

2026-06-11

Fortinet Patches Critical FortiSandbox RCE Flaw (CVE-2026-25089)

Fortinet released security updates addressing multiple flaws across FortiSandbox, FortiOS, FortiProxy, and FortiPortal. The most critical, CVE-2026-25089 (CVSS 9.8), is an OS command-injection bug in FortiSandbox and FortiSandbox Cloud/PaaS that could allow unauthenticated remote command execution via crafted HTTP requests. Fortinet urged customers to upgrade affected versions immediately; additional medium-severity issues were also fixed, with no known in-the-wild exploitation at disclosure.

Award**CrowdStrike**

2026-06-11

CrowdStrike Named Frost Radar Leader in Cloud and Application Runtime Security

CrowdStrike was named the Growth and Innovation Leader in Frost & Sullivan's 2026 Frost Radar for Cloud and Application Runtime Security for the second consecutive year. The report credits CrowdStrike's runtime-first cloud security and AI workload protection, highlighting real-time Cloud Detection and Response and a unified CNAPP platform that correlates telemetry across cloud and AI environments. Frost & Sullivan noted faster detection, investigation, and automated response within existing SOC workflows.

Partnership**CrowdStrike**

2026-06-11

CrowdStrike Joins OpenID Foundation and IDPro Identity Standards Groups

CrowdStrike joined the OpenID Foundation as a Sustaining Corporate Member and IDPro to advance continuous, risk-aware identity security by contributing real-time Falcon-origin signals to open standards. It will participate in the Shared Signals Framework and Continuous Access Evaluation Profile to enable dynamic access decisions as risk changes, fusing Falcon intelligence with SGNL's runtime access enforcement for human users, non-human identities, and AI agents. The effort frames identity as a frontline defense against AI-driven threats.

Product Launch**Zscaler**

2026-06-11

Zscaler Expands Zero Trust SASE with ZAgent Framework

Zscaler announced a major expansion of its Zero Trust SASE platform, centered on the new ZAgent Framework — an agentic AI framework of software agents that automate SASE administration via natural-language prompts in the Zscaler Experience Center, enabling automated configuration, troubleshooting, and policy validation. The release adds the Zscaler Digital Experience Agent for diagnosing user-experience issues and broader coverage for unmanaged devices, B2B partners, and multi-cloud workloads, including a Zero Trust Gateway for Google Cloud.

2026-06-11

Zscaler Launches Zero Trust Tools to Secure AI Agents

Zscaler extended its Zero Trust Exchange to secure autonomous AI agents, launching AI Broker (securing AI communications via MCP and A2A brokers) and Endpoint AI Security (detecting and blocking AI threats on browsers, plugins, extensions, and local AI tools). A new AI Access Graph, leveraging Symmetry Systems technology, maps data and identity connections. Zscaler also expanded AI Protect with AI asset management, red-teaming for MCP servers, prompt-hardening, and access controls across 250+ generative AI apps.

Check Point Expands MSP Platform with AI Governance and Unified Bundles

Check Point announced a major expansion of its MSP platform at Pax8 Beyond 2026, adding a multi-tenant Management Control Plane for centralized administration, native AI security via extended Workforce AI Security, and expanded PSA integrations. New unified security bundles combine email, endpoint, browser, mobile security, SASE, Workforce AI, security awareness training, and DMARC into a single SKU aligned to Microsoft licensing. The goal is to reduce tool sprawl, simplify procurement, and help MSPs secure AI adoption.

Product Launch**AWS**

2026-06-11

AWS Announces Workload Credentials Provider

AWS released the AWS Workload Credentials Provider, a lightweight open-source client-side provider that automates deployment of exported certificates from AWS Certificate Manager and local caching of secrets from AWS Secrets Manager across AWS and non-AWS workloads. It eliminates custom EventBridge automation for certificate renewals, runs on Windows and Linux, and supports Apache and NGINX. The tool is available in all AWS Regions and open on GitHub.

Product Launch**AWS**

2026-06-11

AWS Launches FinOps Agent for AI Cost Governance

AWS launched a FinOps agent for AI cost governance in feature preview at FinOps X 2026, an autonomous agent that monitors cloud and AI spend, detects anomalies, performs root-cause analysis, and routes alerts to teams via Slack or Jira. It ties AI spend to business outcomes, supports token-based cost visibility per model within Bedrock, and allocates costs by IAM roles. Built with a human-in-the-loop approach to foster trust in autonomous cost actions.

Business Expansion**Akamai ~AID**

2026-06-11

Akamai Targets Asia Growth by Bringing AI Inference to the Edge

Akamai announced a strategic APAC expansion focused on operationalizing AI at the edge, led by newly appointed regional MD Sean Li. After surpassing \$1 billion in APAC revenue for 2025, the company aims to accelerate AI inference close to users via GPU-powered edge compute across its distributed network to reduce latency and improve reliability. Target workloads include recommendation engines, live video intelligence, autonomous systems, and AI-assisted apps with embedded workload protection.

Partnership**Fastly ~AID**

2026-06-11

Fastly and Skyfire Partner for Trusted Agentic Commerce at the Edge

Fastly and Skyfire announced a partnership to enable trusted agentic commerce at the edge. Skyfire's identity and payment-backed credentials are integrated into Fastly's edge cloud, letting enterprises securely identify, verify, and transact with AI agents in real time at global scale without re-architecting systems. Edge-based identity and payment validation deliver decisions in milliseconds, complementing Fastly's AI Bot Management and Application Security to distinguish trusted agents from malicious automation and turn agent traffic into accountable economic activity.

Product Launch**A10 Networks**

2026-06-11

A10 Networks Launches Integrated AI and Security Platform

A10 Networks announced a new integrated AI and security platform for healthcare and enterprise customers. An enhanced Advanced Core Operating System (ACOS) adds a fully integrated AI stack to interface with AI Inference and GenAI environments while offloading intensive AI tasks for higher throughput and lower latency. The new A10 Control dashboard centralizes management of Thunder ADC and A10 Defend products, and the Defend portfolio gains AI-powered bot protection alongside continued multi-vector DDoS mitigation.

Radware

2026-06-11

Radware Warns of 'Invisible Supply Chain' Risk from AI Agents

Radware published an analysis on API security in the era of AI agents, warning that AI agents now actively browse, retrieve documents, call APIs, trigger workflows, and integrate with connector and plugin marketplaces. This shift creates a broad new third-party risk surface — an 'invisible supply chain' — as agents operate across systems with minimal human oversight. Radware emphasizes the need for proactive API security measures to govern agent-driven interactions and supply-chain risk.
