Palo Alto Networks

2026-08-10

China Targets Palo Alto Networks in Latest Cybersecurity Review

Coverage published August 10 details China's Cyberspace Administration opening a formal cybersecurity review of Palo Alto Networks, citing national security and critical information infrastructure risk under China's National Security and Cybersecurity Laws. No specific products, flaws, or evidence were cited, and Palo Alto Networks has not publicly commented. The review lands amid broader US-China technology tensions and recent Chinese restrictions on US firms, with no timeline set for a verdict.

RESEARCH REPORT

Fortinet

2026-08-10

Gunra Ransomware Exploits Fortinet VPN Flaws to Bypass MFA and Steal Enterprise Data

Threat research published August 10 details the Gunra ransomware group abusing known FortiOS and FortiProxy vulnerabilities (CVE-2024-55591 and CVE-2025-24472) for initial access. Attackers tamper with authentication files to bypass multi-factor authentication, then pivot with Impacket tooling for lateral movement and credential dumping, and hijack VPN sessions. The report underscores continued adversary targeting of Fortinet edge and VPN infrastructure as a ransomware entry point for enterprise data theft.

PRODUCT LAUNCH Cisco 2026-08-10

Secure Claude Enterprise with Cisco AI Defense

Cisco detailed a new runtime integration that inspects every governed Claude Enterprise prompt with Cisco AI Defense before inference, using Anthropic inference hooks. AI Defense analyzes prompts for injection and jailbreak attempts and returns allow or deny decisions, blocking unsafe requests, while inspecting full conversation transcripts including MCP tool calls. Cisco positions this as enforcement-grade guardrails within a full-lifecycle AI security approach under Cloud Control, spanning discovery, risk assessment, red teaming, and supply chain scanning, without changing user workflows.

PRODUCT LAUNCH Cisco 2026-08-10

Build Agentic Networking Experiences with Meraki and Catalyst Center MCP Servers

Cisco published guidance on using Model Context Protocol servers for Meraki and Catalyst Center to embed live network intelligence into AI assistants, helpdesks, portals, and custom agents. Three deployment options are outlined: a Cisco-managed hosted Meraki MCP server for fast integration, an open-source self-hosted Meraki MCP server for customization and auditability, and an open-source Catalyst Center MCP server for air-gapped or regulated environments. The move advances agentic networking workflows across Cisco's network management platforms.

INDUSTRY NEWS CrowdStrike 2026-08-10

CrowdStrike, Palo Alto Hit Records After Black Hat Cyber Conference

CrowdStrike and Palo Alto Networks shares hit record highs on August 10 following Black Hat in Las Vegas, as BTIG raised price targets to \$237 for CrowdStrike and \$380 for Palo Alto. Analysts framed AI agents as reshaping the threat landscape and driving early-stage demand for AI-powered security plus an endpoint modernization cycle. Other security names rallied alongside them, including Netskope, Zscaler, SailPoint, SentinelOne, and Rubrik.

RESEARCH REPORT Check Point Software 2026-08-10

Check Point Research Publishes 10th August Threat Intelligence Report

Check Point Research released its weekly Threat Intelligence Report on August 10, 2026, covering top attacks, breaches and newly disclosed vulnerabilities. Highlights include AI-related flaws inherited from the workerd runtime affecting Cloudflare Code Mode and Workers, disclosures touching Google Gemini services, and critical patches for Cisco Catalyst SD-WAN and IOS XE rated up to CVSS 9.9. The bulletin also flags WordPress pre-authentication RCE, 15 TP-Link Omada fixes, ZBTlink router backdoor exposure, macOS ClickFix/MacSync Stealer campaigns, and npm packages delivering RAT and infostealer payloads.

Cloudflare Announces Proposed Private Offering of \$2.175 Billion of Convertible Senior Notes Due 2031

Cloudflare announced on August 10, 2026 that it intends to privately offer \$2.175 billion of convertible senior notes due 2031 to qualified institutional buyers under Rule 144A, with an option for purchasers to buy up to \$325 million more within 13 days. The senior unsecured notes mature August 15, 2031, bear semi-annual interest, and are convertible into cash, Class A common stock, or a combination at Cloudflare's election. Proceeds target capped call transactions and general corporate purposes, signaling balance-sheet expansion to fund platform and AI investment.

2026-08-10

Cloudflare Recaps Agents Week: Everything Launched for an Agentic Internet

Cloudflare published its Agents Week wrap-up on August 10, 2026, consolidating a week of launches aimed at an "Agentic Internet" where software agents are first-class users. Announcements spanned an agent execution layer and runtime primitives, the Agent Development Lifecycle for moving prototypes to production, a unified AI control plane with CI/CD for agents, efficient hosting for large models, cross-language Workers RPC between Python and JavaScript, the cloudflare/computer agent runtime, Cloudflare AI Search for agent data retrieval, and Zero Trust concepts covering agent identity and access.

PRODUCT UPDATE**AWS**

2026-08-10

AWS Weekly Roundup: Web Search on Amazon Bedrock, Dogwood Agent Verification, Lambda Bandwidth Boost

AWS's August 10, 2026 weekly roundup bundled several AI infrastructure and networking updates. Amazon Bedrock added web search for OpenAI GPT-5.x models, letting AI applications fetch real-time internet content within AWS data-residency and zero-egress boundaries. Bedrock AgentCore gained Dogwood for runtime verification of AI agents using Cedar policies with temporal conditions. Lambda functions with 2 GB or more memory outside a VPC can now use up to 3,000 Mbps of bandwidth. AWS also backed Agent Plugins and launched Kiro Crew for multi-agent development.

PRODUCT UPDATE**Akamai**

2026-08-10

Akamai Cloud Keeps Strengthening the Foundation (Updated August 2026)

Akamai detailed Q2 2026 Akamai Cloud enhancements aimed at production AI and agentic applications, emphasizing platform maturity over new standalone services. Updates span networking, identity, observability, Kubernetes, and storage: configurable IPv4 ranges with improved routing safeguards, Kubernetes v1.34 for LKE Enterprise clusters, updated CoreDNS and storage, automatic kube-reserved allocation, Kubernetes API audit logs, full Gateway support, and optional Tekton for CI/CD. Akamai positions the work as making distributed AI inference easier to deploy, operate, and scale without infrastructure redesign.

MARKET/FINANCIAL **Fastly** 2026-08-10

Fastly Stock Is Rising Today: What's Driving It, and Are AI-Cloud Peers Moving Too?

Fastly shares jumped roughly 21% to about \$27.69 on August 10, a delayed reaction to Q2 2026 results that beat revenue estimates by about \$9 million. The quarter posted revenue of \$183.3 million, up 23.3% year over year, 65.8% non-GAAP gross margin, \$38.1 million adjusted EBITDA, and 117% net retention, with full-year guidance raised to \$732-\$746 million. Analyst target hikes from Evercore ISI and KeyBanc plus a broader AI-cloud rally fueled the move.

ANALYSIS **Arista Networks** 2026-08-10

As AI Networks Scale In Three Directions, So Does Arista

Arista detailed a three-direction AI networking scaling strategy — scale across (inter-datacenter linking), scale up (memory/XPU integration within racks), and scale out (loosely coupled workgroups) — as it raised full-year 2026 guidance by \$1.1B to \$12.6B. AI back-end and front-end networking revenue is now expected near \$3.6B, roughly 2.1x 2025, with campus around \$1.25B. Management sized the scale-across opportunity at roughly \$3B in switching plus \$1B in optics near-term, growing toward \$15B switching and \$5B optics by 2030.

MARKET MOVE **HPE / Juniper Networks** 2026-08-10

HPE Rises as Investors Lean Into AI Networking and Juniper Integration Momentum

HPE shares climbed about 4.7% as investors priced in sustained AI networking momentum and faster-than-expected Juniper Networks integration. Drivers included record quarterly revenue, a raised full-year outlook, improved free cash flow guidance, and an upgraded forecast of \$2B in cumulative Networks for AI orders. Analysts see Juniper integration strengthening HPE's AI data center and networking strategy, supporting both margins and growth, and broadening HPE's enterprise AI exposure beyond servers into networking infrastructure.
