PARTNERSHIP

Palo Alto Networks

2026-06-25

IBM, Red Hat, and Palo Alto Networks Expand Project Lightwell for AI-Driven Vulnerability Protection

Palo Alto Networks joined IBM and Red Hat to expand Project Lightwell, pairing Palo Alto's network-level virtual patching with IBM and Red Hat's open-source software remediation. The collaboration delivers same-day, automated network protections that block exploits before official fixes ship, spanning open-source, commercial apps, OT, and healthcare tech. It targets enterprise customers via a commercial subscription as AI accelerates the pace of vulnerability discovery and exploitation.

PRODUCT LAUNCH**Fortinet**

2026-06-25

Fortinet Launches FortiSOC, a Unified SOC Platform Powered by Agentic AI

Fortinet announced FortiSOC, a cloud-delivered, unified SaaS security operations platform that combines SIEM, SOAR, threat intelligence, ITDR, UEBA, and case management in one environment. Powered by agentic AI via FortiAI-Assist, it autonomously investigates alerts, hunts threats, and coordinates responses under analyst oversight. FortiSOC complements existing FortiAnalyzer, FortiSIEM, and FortiSOAR products, consolidating core SOC functions under a single subscription.

PRODUCT LAUNCH**Cisco**

2026-06-25

Cisco AI PODs for Collaboration Now Generally Available

Cisco made AI PODs for Collaboration generally available, delivering private, secure on-premises AI for collaboration without cloud replication. The solution includes real-time AI-powered transcription for Cisco Meeting Server and supports air-gapped deployments with no external connectivity. Cisco plans to expand capabilities to AI Assistant summarization, additional languages, and on-premises calling and contact center, and to extend the private AI experience to hybrid cloud Webex deployments.

PARTNERSHIP**Zscaler**

2026-06-25

Zscaler Lands Aston Martin Aramco as Global Cybersecurity Partner

Zscaler announced a multi-year deal as Global Cybersecurity Partner to the Aston Martin Aramco Formula One Team. Zscaler's Zero Trust Exchange will secure the team's design data, race strategy, and real-time track data, enabling secure connections between the track and the AMR Technology Campus. Zscaler branding will debut on the AMR26 car and driver overalls at the Austrian Grand Prix, with both sides emphasizing AI-driven security against machine-speed threats.

PRODUCT UPDATE**Check Point Software**

2026-06-25

Check Point Rolls Out AI-Driven ThreatCloud Engine to Counter ClickFix Attacks

Check Point introduced a new AI-driven detection engine from ThreatCloud integrated across its Zero-Phishing Blade, Email Security, and Browse Security products to counter ClickFix and other user-targeted attacks. The update strengthens pre-delivery defenses that block phishing and malware before threats reach the inbox or browser. It positions Check Point's stack to proactively neutralize social-engineering attacks that turn users into their own attackers.

PRODUCT LAUNCH**Cloudflare**

2026-06-25

Cloudflare Opens Self-Managed OAuth to All Customers

Cloudflare announced general availability of self-managed OAuth for all customers, letting any user create and manage OAuth clients for delegated API access directly from the dashboard. The rollout followed a zero-downtime Hydra 2.x upgrade and a 132-million-row database migration that also cut OAuth API P95 latency by 45%. OAuth replaces long-lived API tokens for SaaS integrations, internal developer platforms, and AI agents, aligning third-party access with Cloudflare's Model Context Protocol.

PRODUCT UPDATE**AWS**

2026-06-25

OpenAI and NVIDIA Nemotron Models on Amazon Bedrock Earn FedRAMP High and DoD IL-4/5 Approval

AWS announced that OpenAI GPT, OpenAI GPT OSS, and NVIDIA Nemotron models on Amazon Bedrock received FedRAMP High and DoD IL-4/5 approvals in AWS GovCloud (US). This enables federal and highly regulated public-sector customers to run these models for government-grade workloads, powered by Mantle for high-performance, serverless inference with zero operator access and automatic capacity management.

RESEARCH**Akamai**

2026-06-25

Akamai Research: New MCP Specification Closes Old Risks but Opens Fresh Attack Surfaces

Akamai published research analyzing the MCP 2026-07-28 specification, finding the overhaul reduces session-based risks and tightens authentication with mandatory OAuth 2.1 and PKCE. However, it introduces new attack surfaces in MCP Apps such as interactive panels and dashboards, with potential for stored XSS and phishing, plus a lingering hit-and-run DoS vector. Akamai urges treating client-supplied state as untrusted, enforcing cryptographic verification, and imposing quotas on asynchronous tasks.

PARTNERSHIP**Radware**

2026-06-25

Radware and Dataiku Partner to Secure Enterprise AI

Radware and Dataiku announced a strategic partnership to embed Radware's application, AI, and API security directly into Dataiku's universal AI platform. Radware's AI Guardian agents will monitor, inspect, and control AI-driven actions across applications, APIs, and data in production, preventing unauthorized actions, data exposure, and goal hijacking. The integration moves security from detection to enforcement at the execution point and expands Radware's reach into AI governance and risk teams.
