PARTNERSHIP

Palo Alto Networks

2026-06-29

IBM, Red Hat, and Palo Alto Networks Expand Project Lightwell to Speed Vulnerability Response

On June 29, 2026, Palo Alto Networks, IBM, and Red Hat expanded Project Lightwell to accelerate vulnerability response across open-source and commercial software. The collaboration pairs Palo Alto Networks' network-level Virtual Patching—deploying same-day protection the moment a flaw is disclosed—with IBM and Red Hat's open-source remediation workflow, spanning OT and healthcare technologies. It adds secure vulnerability-intelligence sharing among vendors and is backed by IBM Security Services for advisory and deployment. The alliance aims to close the gap between vulnerability discovery and effective defense as AI accelerates exploitation.

PARTNERSHIP**HiddenLayer**

2026-06-29

HiddenLayer and Cohere Collaborate to Secure Enterprise Agentic AI

On June 29, 2026, HiddenLayer and Cohere announced a collaboration to remove security barriers to production-scale agentic AI, combining Cohere's North platform with HiddenLayer's AI Security Platform. The partnership delivers runtime protection against AI-native threats—prompt injection, data leakage, model attacks, and malicious tool use—plus governance, audit-ready visibility, and compliance support. HiddenLayer evaluated Cohere North against its security standards and deployed it internally to demonstrate secure adoption. Aimed at regulated industries and government, the effort targets the shift from AI experimentation to secure production, with a joint webinar scheduled for June 30, 2026.

Cloudflare and beehiiv Introduce AI Crawl Control for Independent Publishers

On June 29, 2026, Cloudflare and beehiiv unveiled an integration embedding Cloudflare's AI Crawl Control into the beehiiv platform, giving independent publishers control over how AI crawlers access their content. The feature provides a personalized analytics dashboard showing which AI crawlers reach content, which are blocked, and resulting referral traffic, plus one-click toggles to allow or block specific AI models. Future-proof rights management automatically handles new AI crawlers without code changes. It is rolling out in beta to all beehiiv users, with beehiiv Max customers gaining additional AI-crawler blocking controls.

Check Point Embeds OpenAI Frontier Models into Live Customer Defenses

On June 29, 2026, Check Point Software announced it is among the first security vendors to embed OpenAI's frontier models directly into live customer defenses via OpenAI's Daybreak Cyber Partner Program. Initial deployments include Agentic Network Security Orchestration—improving intent-to-policy translation and policy management—and CTEM Agentic Exposure Validation for prioritizing exposures and drafting remediation. The rollout follows a jointly developed responsible-AI framework featuring abuse prevention, misuse detection, and a phased start with backend automation and managed services. Check Point positions the move as bringing frontier-grade AI into defenders' workflows amid rising AI-enabled threats.

Amazon S3 Server Access Logs Now Deliver to CloudWatch Logs and S3 Tables

On June 29, 2026, AWS announced that Amazon S3 server access logs can now be delivered directly to Amazon CloudWatch Logs and to S3 Tables in Apache Iceberg format. CloudWatch Logs delivery enables instant querying, alarms, cross-account and cross-Region aggregation, and KMS encryption, while S3 Tables delivery allows immediate SQL analysis through Athena, Redshift, and other Iceberg-compatible engines. Logs can still be delivered to general-purpose buckets at no extra cost. CloudWatch Logs delivery is available in all Regions except AWS China and AWS GovCloud (US).
