Cisco Makes Strategic Investment in Exposure-Management Startup Zafran Security

Cisco confirmed a strategic investment in Israeli exposure-management startup Zafran Security, which was valued above \$200 million in its last funding round, amid reports of a \$150M-plus deal. Cisco characterized the move as a strategic investment rather than a full acquisition, reinforcing its platform momentum in threat exposure management. The step continues Cisco's active 2026 M&A streak, which includes Astrix Security and Galileo Technologies, as it builds out a unified security and observability platform.

## Amazon CloudWatch Launches Coding Agent Insights to Measure AI Coding Tool ROI

AWS introduced Coding Agent Insights in Amazon CloudWatch, a new capability that measures the value organizations get from AI coding tools such as Claude, Codex, and GitHub Copilot. Built on OpenTelemetry metrics and integrated with the Claude apps gateway for AWS, it collects telemetry without extra instrumentation and surfaces ROI signals like delivery acceleration, token budgets, spend trends, and correlations with PR velocity. It is available in all AWS commercial regions except UAE, Bahrain, and Tel Aviv.

## Amazon Connect Expands Agentic Voice with 50+ Languages and New Speech Controls

AWS expanded Amazon Connect's agentic voice capabilities with support for more than 50 languages and over 100 new voice options for more natural, human-sounding AI interactions across voice and digital channels. New speech controls let businesses adjust speed, volume, and emotion to match brand tone, while improved turn-taking and response pacing enhance conversational quality. The update targets AI agents that understand, reason, and act within customer conversations.

## OpenAI GPT-5.6 Models Now Available on Amazon Bedrock

AWS made OpenAI's GPT-5.6 model family—Sol, Terra, and Luna—available on Amazon Bedrock's next-generation inference engine via the Responses API. The tiers span flagship reasoning (Sol), balanced performance (Terra), and fast, inexpensive inference (Luna), giving enterprises managed access to frontier models within AWS infrastructure. The launch, highlighted in the July 20 AWS Weekly Roundup, deepens Bedrock's role as a central AI model-serving platform for production workloads.

## Akamai Cloud Single Sign-On Reaches General Availability

Akamai announced general availability of Single Sign-On for Akamai Cloud, enabling federated SSO via SAML 2.0 with external identity providers including Okta, Microsoft Entra ID, and Google Workspace. The release adds emergency access accounts that bypass SSO during IDP disruptions—useful for DevOps scaling or firewall management—while Akamai Control Center remains available as an alternative sign-in method. SAML assertions must be signed for integration.

## Cloudflare Internal DNS Now Generally Available

Cloudflare made Internal DNS generally available, providing authoritative and recursive DNS for private networks over its global network and control plane. The service integrates with Cloudflare's existing Zero Trust, networking, and public DNS offerings, giving enterprises unified private-network name resolution. Enterprise customers using Cloudflare Gateway can access Internal DNS now from the Cloudflare dashboard under Networking → Internal DNS.

## Zscaler Joins the Hiroshima AI Process Friends Group Partners' Community

Zscaler announced it has joined the Hiroshima AI Process (HAIP) Friends Group Partners' Community, reinforcing its commitment to secure, transparent, and trustworthy AI adoption. HAIP provides governance frameworks and principles for safe AI, which Zscaler will support through its security research and threat intelligence. The company highlighted participation in frontier AI security initiatives and transparent governance practices, including not using proprietary customer data for training and relying on anonymized signals for security improvements.
