Radware

2026-07-07

Radware Expands Agentic AI Protection with Governance and Compliance

Radware announced enhancements to its Agentic AI Protection, adding AI governance and compliance capabilities. New audit-ready reporting aligns with ISO 42001, the EU AI Act, and the NIST AI Risk Management Framework, while expanded visibility maps AI agent ecosystems, interactions, and dependencies across SaaS and developer-hosted environments. The update extends protection to developer-hosted agents, including Anthropic Claude Code, helping teams govern, audit, and secure AI agents at scale.

EXECUTIVE APPOINTMENT

CrowdStrike

2026-07-07

CrowdStrike Names Ex-NVIDIA Leader as Chief AI and Autonomous Systems Officer

CrowdStrike appointed Dr. Bartley Richardson, formerly of NVIDIA, as Chief AI and Autonomous Systems Officer. He will lead CrowdStrike's AI initiatives, including the Charlotte AI platform, autonomous security operations, and AI-powered detection and response. The company aims for 'level 5 autonomy' in SOC operations, leveraging its Falcon data to train models on real-time telemetry and threat intelligence as a step toward autonomous, cybersecurity-focused AI.

Barracuda Acquires Evo Security to Expand MSP Identity Protection

Barracuda Networks announced the acquisition of Evo Security to broaden identity protection for MSPs. The deal integrates Evo's privileged access management, identity protection, access control, and identity threat detection and response into the BarracudaONE platform. Barracuda aims to deliver an integrated cyber-resilience platform spanning identity, email, and network data rather than a collection of point products, while letting Evo partners continue with minimal disruption. Terms were not disclosed.

THREAT RESEARCH**Palo Alto Networks**

2026-07-06

Unit 42 Warns Cyberattacks Now Unfold in as Little as 72 Minutes

At its Ignite on Tour event, Palo Alto Networks' Unit 42 warned that attacker breakout times have collapsed, with some compromises unfolding in as little as 72 minutes. VP Philippa Cogswell cited AI-driven threat amplification, identity weaknesses, software supply-chain vulnerabilities, and stealthy nation-state tactics across 750+ incidents in 50 countries. The firm urged AI-assisted detection, zero-trust security, and stronger identity protection, framing cybersecurity as a board-level business risk.

Palo Alto Networks Publishes Guidance on Building an AI Governance Model

Palo Alto Networks published a point-of-view piece urging organizations to adopt prudent AI governance that fosters innovation while mitigating risk. Featuring Haider Pasha, VP & Chief Security Officer for EMEA, the article outlines practical actions to avoid dangerous AI practices and build a governance model that balances speed with safety. It reinforces the company's AI security positioning amid rapid enterprise AI adoption.

REPORT**Check Point Software**

2026-07-06

Check Point Releases 2026 Exposure Gap Report

Check Point Software released 'Under Pressure: The 2026 Exposure Gap Report,' finding that critical vulnerability exposures more than doubled year-over-year to 42.6% of all critical exposures, up from 18.7%. Yet fewer than 1 in 12 alerts warranted urgent action after exploitability validation, and phishing exposures rose to 10.5%. The report stresses that evidence-based prioritization enables rapid remediation, with 85.9% of recommended fixes implemented across industries.

Cloudflare Launches Workers Cache, a Tiered Cache in Front of Every Worker

Cloudflare introduced Workers Cache, a tiered cache that sits in front of every Worker endpoint and is enabled with a single Wrangler config line. On cache hits it serves responses directly from Cloudflare's network, bypassing Worker execution and CPU cost; on misses the Worker runs and cacheable responses are stored. Features include stale-while-revalidate, Vary support, per-endpoint cache control, programmatic purges, and multi-tenant safe cache keys. It is available today to all Workers on any plan.

Anthropic's Claude Sonnet 5 Now Available on AWS

AWS announced that Anthropic's Claude Sonnet 5 is now available via Amazon Bedrock and the Claude Platform on AWS. The model targets advanced coding, agentic tasks, and professional work, offering strong stateful agent performance while balancing capability, cost, and speed. It expands AWS's generative AI model lineup, giving customers more foundation-model choice for conversational AI, content generation, coding assistance, and business process automation.

Amazon SageMaker Studio Adds One-Click Hugging Face Model Deployment

AWS announced that Amazon SageMaker Studio now integrates with Hugging Face for one-click model deployment and customization. The flow automatically provisions a Studio environment with the necessary IAM permissions and default GPU quotas (G5, G6, G4dn), supporting serverless fine-tuning, evaluation, and endpoint deployment without manual quota requests. The integration is available across all commercial AWS regions.

Amazon WorkSpaces for AI Agents Becomes Generally Available

AWS made Amazon WorkSpaces for AI agents generally available, enabling AI agents to securely access and operate desktop applications in managed WorkSpaces without app modernization. AWS also highlighted up to 2x faster SageMaker generative inference scale-out via container image caching. The updates deepen AWS's focus on agentic AI infrastructure and operational tooling.

Zscaler Research Finds Autonomous AI Agents Vulnerable to Indirect Prompt Injection

Zscaler's ThreatLabz warned that autonomous AI agents can be tricked by indirect prompt injection (IPI) traps embedded in web content. In internal tests across 26 LLMs, several models were vulnerable to IPI schemes while others resisted, showing commercial LLMs are not inherently secure against agentic attacks. As AI agents become common web interfaces, the attack surface widens, presenting new insider-threat-like risks for enterprise deployments.
