Cloudflare Kicks Off 2026 Birthday Week with Annual Founders' Letter

Cloudflare opened its 2026 Birthday Week, marking its 16th anniversary, with a Founders' Letter framing AI and AI agents as the main forces reshaping the Internet. The letter previews crawling improvements so agents fetch only new content and reduce load on sites, a mechanism for creators and sites to be paid when third-party agents use their content or tools, and partnerships with like-minded organizations. Expect a week of product announcements across the Cloudflare platform.

Threat Intel Citrix (NetScaler) 2026-09-27

Citrix Patches Eight NetScaler ADC and Gateway Flaws, Including Two Exploited Zero-Days

Citrix released critical updates (bulletin CTX697096) for NetScaler ADC and Gateway covering CVE-2026-88771 through CVE-2026-88778. Two flaws, CVE-2026-88771 (default configurations) and CVE-2026-88772 (VPN virtual servers with DTLS), are being exploited for unauthenticated remote code execution (CVSS 9.5); the rest cover denial of service, HTTP request smuggling and policy bypass. Admins were warned to take exposed appliances offline, and CISA added the flaws to its KEV catalog on September 27 with a September 30 federal patch deadline. No workaround is available.

<https://community.citrix.com/forums/topic/259152-critical-update-citrix-netscaler-adc-and-citrix-netscaler-gateway-security-bulletin-for-cve-2026-88771-through-cve-2026-88778/>

Product Update Palo Alto Networks 2026-09-25

Securing the AI Coding Frontier: Prisma AIRS + Cortex Agentic Endpoint Security (AES)

Palo Alto Networks has combined Cortex Agentic Endpoint Security (AES) with Prisma AIRS to protect autonomous AI coding assistants such as Cursor, Claude Code, Codex and Antigravity on developer machines. AES discovers AI agents, extensions and artifacts on the endpoint, scores their risk and enforces policy locally, while Prisma AIRS inspects prompts, MCP tool calls and network activity in real time for prompt injection, malware and data leakage. Policies are managed centrally in Strata Cloud Manager, with user feedback and exception requests when actions are blocked.

Product Update Cloudflare 2026-09-25

Cloudflare Turnstile Spin Lets AI Coding Agents Set Up Bot Protection End-to-End

Turnstile Spin lets AI coding agents deploy Cloudflare's free CAPTCHA alternative end to end: creating the widget, embedding it on the site and wiring up server-side validation, with user approval at each step. It can also migrate sites off other CAPTCHA providers and repair broken installations. Spin runs from the dashboard, Wrangler or a public agent skill, and has generated more than 65,000 widgets since its July release.

Threat Intel Cloudflare 2026-09-25

Cloudflare Emergency WAF Release Blocks WordPress and JFrog Artifactory Exploits

Cloudflare pushed an emergency update to its WAF Managed Ruleset on September 25, 2026, adding detections for a WordPress path traversal and local file inclusion flaw (CVE-2026-87902) with related XSS, and for JFrog Artifactory authentication bypass flaws (CVE-2026-42018, CVE-2026-82329). Cloudflare still advises customers to apply vendor patches on their origin servers.

Product Update AWS 2026-09-25

AWS IAM Outbound Identity Federation Adds PrivateLink VPC Endpoints for OIDC Discovery

AWS IAM outbound identity federation now supports interface VPC endpoints (AWS PrivateLink) for its OIDC discovery APIs. Workloads inside a VPC can retrieve OIDC metadata and signing keys without internet access, allowing private verification of STS-issued tokens. The capability is available in all commercial, AWS GovCloud (US) and China Regions at standard PrivateLink pricing.

Event Barracuda Networks 2026-09-25

Barracuda Named Finalist for Best Use of AI in Cybersecurity in 2026 A.I. Awards

Barracuda was named a finalist for Best Use of AI in Cybersecurity in the 2026 A.I. Awards for Barracuda Integrated Email Protection. The product combines behavioral AI, natural language analysis, communication-pattern analysis and automated response to detect and remediate phishing, business email compromise, account takeover, impersonation and AI-assisted social engineering. Winners will be announced October 13, 2026.

Research Imperva (Thales) 2026-09-25

Imperva Discloses Drive-By RCE in Microsoft DevLabs DebugMCP AI Agent Debugging Tool

Imperva's threat research team found a critical remote code execution flaw in Microsoft DevLabs DebugMCP v1.1.4, an MCP-based debugging tool for AI agents. Visiting a malicious web page could let an attacker use DNS rebinding to reach the developer's local MCP server and run code pulled from a remote file share, potentially exposing cloud keys and tokens. Microsoft fixed the issue with host and origin validation; Imperva urges updating to DebugMCP 1.2.0 or later.
