PRESS RELEASE Palo Alto Networks 2026-09-07

Palo Alto Networks Signs OpenAI's Call to Action on Cyber Defense

Palo Alto Networks joined ServiceNow and Mate Security as first-day signatories of OpenAI's "A Call to Action on Cyber Defense," a public commitment to accelerate adoption of AI-powered defense across the security ecosystem. Palo Alto represents the established platform vendor position, embedding AI across a broad security portfolio, while co-signers represent workflow platforms and autonomous agent models. The pledge frames vendor coordination on agentic AI defense as the next competitive battleground for security platforms.

<https://markets.businessinsider.com/news/currencies/mate-security-palo-alto-networks-and-servicenow-support-openai-s-call-for-a-new-era-of-cyber-defense-1036526159>

RESEARCH Palo Alto Networks 2026-09-07

Unit 42 Research Shows AI Agents Compress Ransomware Intrusions to 10 Hours

Coverage of Palo Alto Networks Unit 42 findings details how AI agents let ransomware operators map networks, harvest secrets, escalate privileges, and exfiltrate cloud keys in roughly 10 hours — work that previously took weeks. The research highlights a collapsing detection window and argues defenders need automated response, tighter identity and network access controls, and AI-assisted detection to keep pace with machine-speed intrusions.

PRODUCT UPDATE Cisco 2026-09-07

Cisco Discloses Critical Nexus 9000 and IOS XR Vulnerabilities Across Every Release

Cisco disclosed a large batch of networking OS vulnerabilities, including critical remote code execution flaws affecting Nexus 9000 switches and seven CVE groups touching every IOS XR release. Two flaws carry CVSS 9.8 scores and no workaround exists — remediation requires release- and platform-specific software maintenance updates, or moving to a future release. Cisco noted no known public exploitation, but the train-by-train patching burden creates significant upgrade planning work for network operations teams.

PARTNERSHIP CrowdStrike 2026-09-07

Nile Integrates Secure Network-as-a-Service Data With CrowdStrike Falcon Next-Gen SIEM

Nile's Secure Network-as-a-Service now streams network events, security alerts, and access audit logs directly into CrowdStrike Falcon Next-Gen SIEM, letting SOC teams correlate network activity with endpoint telemetry without deploying additional sensors. The connector is available now, with a preview planned to surface CrowdStrike endpoint posture inside the Nile Portal. It is the first phase of a broader partnership extending Zero Trust visibility across managed, unmanaged, IoT, and OT devices.

PRODUCT LAUNCH CrowdStrike 2026-09-07

CrowdStrike Launches SafeMind Agentic Cybersecurity Models Built With NVIDIA

CrowdStrike introduced SafeMind, a family of purpose-built cybersecurity models and agentic harnesses from its Cyber Superintelligence Lab that run natively inside the Falcon platform. Built with NVIDIA Nemotron open models and trained on CoreWeave infrastructure, SafeMind is positioned as the first agentic cybersecurity system for defenders, with a Project QuiltWorks program offering trusted access to standalone models. The move pushes frontier AI directly into detection and response workflows at machine speed.

PARTNERSHIP Check Point Software 2026-09-07

Check Point Brings OpenAI Daybreak Models Across Its Security Platform

Check Point expanded its collaboration with OpenAI, embedding the Daybreak frontier AI models across its security platform via the Daybreak Defense Network. The models are being rolled out in four areas — agentic exposure validation that prioritizes real exploit paths, agentic security management for policy and remediation decisions, automated threat research, and faster incident remediation — combining OpenAI reasoning with Check Point's threat intelligence and enforcement. The phased rollout emphasizes governance, containment of model actions, and testing before production use.

RESEARCH Check Point Software 2026-09-07

Check Point Research: AI Agents Compromised an Enterprise Network in Under 10 Hours

Check Point Research's 7th September Threat Intelligence Report documents an AI-assisted ransomware intrusion that compressed weeks of attacker work into under 10 hours, with autonomous agents mapping internal networks, harvesting code, pulling root credentials from a secrets manager, and abusing build pipelines. The report also details GitSpawn, a vulnerability class affecting AI coding agents including Claude Code, Codex, Cursor, and Goose, where malicious Git configurations trigger arbitrary code execution.

<https://research.checkpoint.com/2026/7th-september-threat-intelligence-report/>

PRODUCT LAUNCH Cloudflare 2026-09-07

Cloudflare Expands AI Coding Agent Support with Cursor Cloud Agents on Sandboxes

Cloudflare announced that Cursor Cloud Agents can now run on Cloudflare Sandboxes, letting AI coding workloads execute inside customer-controlled Cloudflare accounts rather than vendor infrastructure. Each Cursor session runs in an isolated container, keeping code, build caches, secrets, and artifacts on the customer side while Cursor still handles the agent loop, inference, and planning. Communication stays outbound-only, and enterprises can use worker pools to scale agent sessions.

PRODUCT UPDATE AWS 2026-09-07

AWS Weekly Roundup: Claude Fable 5.1 on AWS, Amazon Linux 2027 Preview, Agent Registry GA

AWS published its weekly roundup covering Claude Fable 5.1 availability on AWS for long-running coding, research, and enterprise workflows with new data-retention controls and Enterprise Frontier Safeguards; the Amazon Linux 2027 public preview built on kernel 7.1+ for AI/ML, container, and database workloads; general availability of AWS Agent Registry as a private, governed catalog for agents and tools with CloudTrail auditing; and a new AWS Certified AI Business Strategist credential.

<https://aws.amazon.com/blogs/aws/aws-weekly-roundup-claude-fable-5-1-on-aws-amazon-linux-2027-preview-aws-certified-ai-business-strategist-and-more-september-7-2026/>

PARTNERSHIP AWS 2026-09-07

Microsoft and AWS Launch Managed Multicloud Interconnect for Enterprises

Microsoft and AWS announced a managed multicloud interconnect that creates private, high-speed links between Azure and AWS. The connection is presented as a single logical cloud resource provisioned through API, console, or infrastructure-as-code with a published OpenAPI spec, and is built on Azure ExpressRoute and AWS Direct Connect underneath. The service removes the need for enterprises to broker third-party circuits or manage physical cross-connects themselves.

FUNDING HiddenLayer 2026-09-07

HiddenLayer Announces \$100M Series B as AI Security Market Surges

HiddenLayer's \$100M Series B, led by Delta-v Capital with Ten Eleven Ventures, Morgan Stanley, Microsoft M12 and Booz Allen Hamilton, drew fresh trade coverage highlighting how fast the AI runtime security market is scaling. CEO Chris Sestito said ARR grew more than tenfold in the past year into the tens of millions, with over 90% from new customers across financial services, big tech and government. Funds go to Agentic Runtime Security, Agent Harness Security, and EMEA expansion.

<https://theaiinsider.tech/2026/09/07/hiddenlayer-announces-100m-series-b-as-ai-security-market-surges/>

BLOG POST Lasso Security 2026-09-07

OWASP Top 10 for LLM Applications 2026: What Changed and What Matters

Lasso Security published an analysis of the newly released 2026 OWASP Top 10 for LLM Applications, noting Prompt Injection holds #1 and Sensitive Information Disclosure #2, while Excessive Agency climbed to #3 and Unbounded Consumption jumped four spots. The post maps each risk to operational capabilities — runtime inventory, behavioral baselining and adaptive protection — under Lasso's Discover-Assess-Protect framework, positioning the list as a prioritization tool for CISOs governing agentic AI.

<https://www.lasso.security/blog/owasp-top-10-for-llm-applications-2026-what-changed-what-surprised-us-what-matters>

BLOG POST Akamai 2026-09-07

Serverless AI Agents With Spin and Akamai Functions

Akamai's developer blog published a technical walkthrough for building and deploying autonomous AI agents as serverless workloads on Akamai Functions using Spin and WebAssembly. The post claims zero cold starts, sandboxed outbound access restricted to LLM endpoints, and roughly 50-70 second global deployment, with no idle-resource charges. It positions Akamai Functions plus Connected Cloud as an edge runtime for distributed agentic inference.

PRESS RELEASE Citrix (NetScaler) 2026-09-07

Australia's ASD Issues Critical Alert Urging Immediate Patching of NetScaler ADC and Gateway

The Australian Signals Directorate's ACSC issued a critical alert urging organizations to immediately patch NetScaler ADC and NetScaler Gateway against two critical flaws: CVE-2026-19489, a memory overflow when SIP ALG is enabled on Large Scale NAT, and CVE-2026-19490, an authentication bypass when SAML actions or VPN gateway mode are enabled. ASD told organizations to inventory affected versions, apply Citrix mitigation guidance, and confirm with third-party providers that patches and monitoring are in place.

<https://www.techpartner.news/news/asd-issues-critical-alert-on-citrix-vulnerabilities-628728>

BLOG POST Citrix (NetScaler) 2026-09-07

Active Attacks Now Exploit Critical Citrix NetScaler Authentication Bypass CVE-2026-19490

Exploitation attempts against NetScaler ADC and Gateway began within about 24 hours of a public proof-of-concept, targeting CVE-2026-19490, a CVSS 9.3 authentication bypass that lets unauthenticated attackers reach VPN gateways and AAA servers. Source IPs were observed in Australia, Germany, Japan, and the US. Citrix shipped fixes on August 19 with no supported workaround; Shadowserver counted over 22,000 exposed NetScaler ADC instances.

PARTNERSHIP **HPE / Juniper Networks** 2026-09-07

HPE Juniper Networking Named the Fabric Behind Oracle's Global AI Data Centres

Data Centre Magazine detailed how Oracle is standardizing on HPE Juniper Networking across its global OCI AI data centres, deploying PTX and MX routing plus QFX and EX switching under a potential multi-year agreement that includes networking support services and HPE-issued warrants. The coverage highlights intelligent fabric telemetry that surfaces bottlenecks, packet loss, and degradation early to protect GPU utilization across AI superclusters.
