Palo Alto Networks

Jul 14, 2026

Palo Alto Networks and Lumen Launch Network Threat Intelligence Integration for Cortex XSIAM

Lumen Technologies and Palo Alto Networks unveiled an integration pairing Lumen Defender Advanced Managed Detection and Response (AMDR) with Palo Alto's Cortex XSIAM, powered by Black Lotus Labs threat intelligence. The combined offering adds network-level visibility to detect reconnaissance and staging activity, speeds triage, and reduces alert fatigue through AI-assisted automation. It supports co-managed and fully managed SOC models, and Lumen extended its Cortex XSIAM specialization into Singapore as a NextWave partner.

Product Launch

Fortinet

Jul 14, 2026

Fortinet Expands FortiEndpoint with AI Governance, DLP, and FortiAI-Assist for the AI Era

Fortinet announced major FortiEndpoint enhancements built for the AI era, adding centralized visibility and control over sanctioned and unsanctioned AI apps, shadow AI detection, and native data loss prevention that inspects sensitive data flowing to AI apps and agents. FortiAI-Assist brings natural-language investigations, event summaries, device risk scoring, and guided remediation. Delivered through one agent, one console, and one license within the Security Fabric, the new capabilities are expected to ship in Q3 2026.

Cisco

Jul 14, 2026

Cisco Demonstrates Live Entanglement-Based Quantum Key Distribution on 8000-Series Routers

Cisco showcased a live entanglement-based QKD network test at its Photonics Center in Italy, using Aliro's Orchestrator to control zerothird's eQKD hardware and deliver keys to Cisco 8000-series routers via the SKIP interface for quantum-secure MACsec sessions. Telemetry tracked eavesdropper detection, QBER, and link health, triggering automated remediation. The demo, part of Cisco's broader quantum networking push with IBM, Qunnect, and Atom Computing, advances field-ready interoperability between third-party QKD hardware and production routers toward commercial quantum-safe services.

CrowdStrike

Jul 14, 2026

CrowdStrike Integrates Anthropic Claude Monitoring into the Falcon Platform

CrowdStrike introduced an integration that ingests Anthropic Claude Enterprise and Claude Platform activity logs and conversations into Falcon Next-Gen SIEM, delivering centralized visibility, detection, response, and governance for enterprise AI use. Security teams can correlate AI activity with endpoint, identity, and cloud telemetry, automate workflows via Charlotte Agentic SOAR, and apply policy-driven oversight through Falcon AI Detection & Response and Falcon Shield. The move extends CrowdStrike's monitoring to protect AI activity alongside existing security signals.

Security Advisory

Zscaler

Jul 14, 2026

Zscaler Deploys Protections for 26 Windows Vulnerabilities from Microsoft's July 2026 Patch Tuesday

Zscaler announced it proactively deployed protections covering 26 Windows vulnerabilities disclosed in Microsoft's July 2026 security bulletins. Working with Microsoft through the MAPP program, Zscaler said it will continue monitoring for related exploits and push additional protections as needed, reinforcing its cloud security platform's threat-prevention posture for customers.

Check Point Research: AI Has Crossed From Assistant to Operator (AI Security Report 2026)

Check Point Research published its Annual AI Security Report 2026, warning that AI has shifted from assisting attackers to autonomously operating live cyberattacks with minimal human input across reconnaissance, malware development, intrusion, and vulnerability research. The report documents AI-driven breaches, compression of the exploit window from days to hours, and doubling of high-risk enterprise GenAI prompts. Check Point outlines three defensive pillars: Security for AI (AI Agent Security), Security by AI (ThreatCloud AI), and Security with AI (Workforce AI Security).

Security Update

Cloudflare

Jul 14, 2026

Cloudflare WAF Adds Blocking Rules for Citrix NetScaler and Progress Kemp LoadMaster CVEs

Cloudflare's July 14 WAF release added managed ruleset protections targeting two critical infrastructure flaws: CVE-2026-8451, an unauthenticated memory-disclosure bug in Citrix NetScaler ADC/Gateway SAML IdP, and CVE-2026-8037, an unauthenticated remote code execution vulnerability via OS command injection in Progress Kemp LoadMaster. Both detections in the Cloudflare Managed Ruleset were upgraded from log-only to actively blocking, hardening customers against exploitation of these widely deployed ADC and load balancer products.

AWS

Jul 14, 2026

AWS Security Hub Expands with Multicloud Security Monitoring for Microsoft Azure

AWS extended Security Hub with multicloud support for Microsoft Azure, adding cross-provider security monitoring within a single console. The update centralizes cloud security operations across AWS and Azure environments, positioning Security Hub as a cross-cloud foundation for full-stack security posture management and consolidating findings for teams managing hybrid, multi-cloud estates.

AWS

Jul 14, 2026

AWS Security Hub Adds AI Inventory and GuardDuty AI Workload Protection

AWS launched an organization-wide AI inventory in Security Hub, giving continuously updated visibility into AI assets and their security posture across Bedrock, AgentCore, and SageMaker, plus self-hosted workloads via Amazon Inspector SBOM analysis and external AI endpoints via GuardDuty DNS telemetry. GuardDuty AI Protection detects threats and injection risks in AI infrastructure, and GuardDuty AI-powered investigations (preview) speed context-rich analysis. The AI inventory is included with Security Hub Essentials at no extra cost.

Product Launch

Akamai

Jul 14, 2026

Akamai Deploys NVIDIA AI Grid Across 4,400 Edge Locations for Low-Latency Inference

Akamai said it became the first to operationalize NVIDIA's AI Grid reference design, rolling it out across its global network of 4,400 edge locations using NVIDIA RTX Pro 6000 Blackwell Server Edition GPUs. The deployment enables low-latency, edge-driven AI inference for agentic and physical AI, offering fine-tuned models close to users for use cases like real-time video, gaming NPCs, fraud detection, and content transcoding, combining local compute responsiveness with global web scale.

Corporate News

Akamai

Jul 14, 2026

Akamai Signs \$1.8 Billion Seven-Year Cloud Infrastructure Deal with Anthropic

Akamai reportedly secured a seven-year, \$1.8 billion cloud infrastructure contract with Anthropic, described as the largest customer deal in Akamai's history. Following an earlier \$200 million CIS deal, the agreement deepens Akamai's push to host AI workloads at scale, building on its Blackwell GPU deployments and AI Grid edge expansion. Akamai's Q1 Cloud Infrastructure Services revenue reached \$95 million, up 40% year over year, and its shares rose sharply after the disclosure.

Partnership**Akamai**

Jul 14, 2026

Akamai Joins WWT's AI Readiness Model for Operational Resilience (ARMOR) as Strategic Security Partner

Akamai became a strategic security partner for World Wide Technology's AI Readiness Model for Operational Resilience (ARMOR), integrating its software intelligence with NVIDIA BlueField DPUs to remove the security 'tax' on AI workloads. ARMOR is a vendor-agnostic framework spanning governance, model protection, secure AI operations, infrastructure security, and data protection. Akamai contributes to three pillars: offloading security with BlueField, securing AI data lakes and APIs, and end-to-end defense with DDoS protection for large-scale AI deployments.

Award**Arista Networks**

Jul 14, 2026

Arista Networks Named a Leader in 2026 Gartner Magic Quadrant for Enterprise Wired and Wireless LAN

Arista Networks was named a Leader in the 2026 Gartner Magic Quadrant for Enterprise Wired and Wireless LAN, recognized for its unified, software-defined approach and AI-optimized connectivity from data center to campus edge. The placement highlights Arista's expanding Cognitive Campus Networking portfolio, including rugged industrial edge platforms and new wireless access points, reinforcing its push to simplify operations and enable AI-driven networking across environments.

Corporate News**HPE / Juniper Networks**

Jul 14, 2026

Analysts Cite HPE's Juniper Integration and Marvis AI as Key Catalyst for AI Networking Growth

Wall Street analysts highlighted stronger-than-expected progress from HPE's Juniper Networks integration, citing earlier-than-anticipated cost and revenue synergies. Citi reiterated a Buy with a \$70 target, pointing to product innovation and rising cloud and AI infrastructure demand, while UBS held Neutral at \$65 after Discover 2026. Analysts emphasized the Marvis AI engine embedded in data center and CX Campus switches, AI-powered self-driving networks, and projected 8-12% networking revenue growth supported by a growing backlog.
