Palo Alto Networks Expands Prisma AIRS Runtime Security Integration with Google Cloud Agent Gateway

Palo Alto Networks expanded Prisma AIRS runtime security integration with Google Cloud's Agent Gateway to monitor autonomous AI agent behavior, including tool calls and external connections, blocking unauthorized tool use, memory manipulation and credential theft. It plans inspection of Gemini Enterprise Agent Platform inputs and outputs this fall, and added model security checks via a Google Cloud Marketplace service that scans models for licensing, publisher identity and suspicious elements before deployment using Strata Cloud Manager policies.

Cisco Delivers Trusted AI at Scale Through New Splunk Advancements

Cisco launched Cisco AI POD for Splunk, a validated AI stack built on Cisco infrastructure, NVIDIA accelerators and Kubernetes, letting Splunk Enterprise customers run self-managed AI on-premises, in private clouds and in air-gapped environments. Splunk Agent Observability now extends to Splunk Observability Cloud and Cisco Cloud Control with runtime guardrails against unsafe or costly AI actions, plus new 'tokenomics' capabilities to track and forecast AI token spend. Accenture, bitsIO, Wipro and World Wide Technology support deployments.

Cisco LLM Security Leaderboard Expands to Text, Image, and Audio Modalities

Cisco expanded its LLM Security Leaderboard to rank models across image and audio in addition to text, adding 102 evaluations since June for 136 models from Amazon, Anthropic, Google, Meta, Mistral, OpenAI, xAI and others, including 55 image and 14 audio models. Models are tested in base form without guardrails for a consistent security baseline, and results show attack resistance varies significantly by modality.

Cisco and VAST Data Build Trusted Foundation for Confidential AI with DataEnclave

As part of its Secure AI Factory strategy, Cisco highlighted a collaboration with VAST Data on DataEnclave, a confidential AI capability in VAST DataEngine that protects AI workloads at runtime and verifies them inside hardware-isolated environments. Cisco pairs it with VAST's data infrastructure, Cisco AI Defense for AI lifecycle security, and observability, aiming to protect production models and data without sacrificing performance or scale.

CrowdStrike Named a Leader in The Forrester Wave: Proactive Security Platforms, Q3 2026

Forrester named CrowdStrike a Leader in its Proactive Security Platforms Wave for Q3 2026, awarding the highest Strategy score of any vendor and perfect 5/5 scores for Innovation and Roadmap. Forrester cited the Falcon platform's unified approach across exposure management, threat intelligence, security operations and AI-driven action, along with Charlotte AI and AgentWorks, which provide prebuilt and no-code AI agents to assess, prioritize and remediate risk.

Wipro Launches CISO Command Centre with CrowdStrike Falcon at Its Core

Wipro launched the CISO Command Centre, a unified security operations service built on its CyberTransform and CyberShield offerings with CrowdStrike Falcon at the core. It consolidates endpoint, cloud, exposure and AI security signals into one environment for detection and response, extending CrowdStrike's partner-led go-to-market into managed and consulting services and tying into Project QuiltWorks, CrowdStrike's coalition focused on frontier AI risks.

Zscaler Appoints Ross Tackett as Chief Revenue Officer

Zscaler named Ross Tackett, its Head of Worldwide Sales, Chief Revenue Officer effective October 1, 2026, succeeding Mike Rich, who is stepping down for personal reasons and will remain a strategic advisor through December 31, 2026. Tackett will lead global revenue operations, sales, strategic partners and go-to-market, bringing 30+ years of tech sales experience including ServiceNow and Dell. ZS shares fell more than 4% after hours; Zscaler's Investor Day is October 6.

Check Point Integrates OpenAI Daybreak Cyber Models into Security Workflows

Check Point announced a phased integration of OpenAI's Daybreak cyber models through the Daybreak Defense Network across four areas: exposure validation that tests attack paths and ranks exploitable risk, Keystone security management, threat investigation that correlates telemetry, and NexPloit vulnerability research using AI analysis of vulnerable code and patches. Some capabilities are in production while others are in development with design partners; model access is tightly controlled and outputs are validated before automation.

Check Point Pushes Action-Level Controls for AI Agents via Workforce AI Security

A Check Point executive blog argues AI agents now act as privileged enterprise workers, so security must govern what agents do, not just what they access. It positions Workforce AI Security as a Discover-Govern-Protect model that maps agent operations via MCP servers, classifies tool calls as create, read, update or delete with risk scores, applies Allow/Block policies to automated actions, and inspects prompts, responses and tool calls in real time.

Cloudflare and Microsoft Disrupt EvilTokens AI-Powered Phishing Service

Cloudflare, Microsoft and law enforcement disclosed the takedown of EvilTokens, an AI-assisted phishing-as-a-service operation that compromised more than 12,000 inboxes across 10,000+ organizations using device-code phishing to bypass some MFA protections. Cloudflare's Cloudforce One dismantled related Workers projects and infrastructure; 50 websites were seized and 150+ domains disabled. Partners included Health-ISAC, Coinbase and OpenAI, and two people were arrested in the UK.

Cloudflare Discloses and Remediates Cross-Tenant Data Exposure Flaw in Containers

Cloudflare disclosed a cross-tenant data exposure vulnerability in Cloudflare Containers and Sandboxes reported by Accomplish researcher Oren Yomtov on September 4. Cloudflare deployed a fleet-wide fix restoring zeroed-block behavior, retired container disks and rebuilt cached image layers, completing cleanup on September 19. No customer action is required, Cloudflare found no evidence of compromised customer data, and a bug bounty was paid.

Cloudflare Open-Sources Cloudflare OS Enterprise AI Agent Framework

Cloudflare open-sourced Cloudflare OS (CFOs), an enterprise AI agent workspace that runs in customers' own Cloudflare accounts on Cloudflare Access and AI Gateway. Rather than chat copilots, teams build modular micro-apps shared through a catalog, with per-tenant token governance, isolated app databases, real-time state sync and zero-trust authentication. Via AI Gateway it supports bring-your-own-model, routing across model tiers, and telemetry, budgets and rate limits on token use.

AWS Cleared for NATO RESTRICTED Cloud Workloads Across the Alliance

AWS received NATO clearance to run assessed cloud services with NATO RESTRICTED information across member countries after meeting NATO's D32 security requirements, following evaluation by Spain's National Cryptographic Centre. NATO bodies, member states and defense contractors can now use these services as a baseline for restricted systems, though each nation must still authorize its own deployments. AWS operates 15 regions in NATO countries.

AWS Network Security Manager Now Generally Available in US East (N. Virginia)

AWS made Network Security Manager generally available in US East (N. Virginia). The service centrally deploys and enforces security policy across an AWS Organization, supporting AWS WAF and Shield Advanced now with Network Firewall support coming soon. It automatically protects internet-facing assets such as Application Load Balancers and CloudFront distributions and detects and remediates configuration drift, keeping WAF and DDoS protection consistent with less manual effort.

AWS Details Multi-Account AI Agent Architecture with Bedrock AgentCore Gateway and MCP

AWS published a reference architecture for centrally running AI agents across multiple accounts using Amazon Bedrock AgentCore Gateway and the Model Context Protocol. A central platform account hosts agents and LLM inference while each line of business exposes data and tools as MCP servers in its own AWS account. AgentCore Gateway gives agents a single endpoint to discover and invoke tools across accounts, with built-in governance and policy controls.

Akamai Announces \$11.6 Billion Multi-year Agreement with Anthropic to Support Growing Demand

Akamai expanded its relationship with Anthropic through a \$11.6 billion, seven-year commitment to run Anthropic's growing CPU workloads on Akamai Cloud's distributed AI infrastructure, expandable by up to \$9 billion for a potential total of about \$20 billion. Anthropic receives a warrant for up to about 5% of Akamai's common stock, with roughly 2% vesting now. Akamai expects about \$5.5 billion in related capital spending, including about \$1.7 billion more in 2026, with 2026 revenue guidance unchanged.
