Security Advisory

Palo Alto Networks

2026-07-09

Palo Alto Networks Patches 13 Vulnerabilities Across PAN-OS and Prisma

Palo Alto Networks released multiple security advisories patching 13 vulnerabilities across its product line. The most severe, CVE-2026-0288 in PAN-OS, is a high-severity flaw in the User-ID Terminal Server Agent that can enable denial-of-service or arbitrary code execution via crafted network traffic on exposed firewalls (CVSS up to 9.2). Additional PAN-OS and Prisma Access Agent flaws could allow command execution, information disclosure, VPN traffic interception, or authentication bypass. The company reports no known active exploitation but urges prompt patching, noting a rise in internally discovered vulnerabilities aided by its AI tooling.

Palo Alto Networks Named 'Company to Beat' in AI Security for Second Consecutive Year

Palo Alto Networks announced it was named the 'Company to Beat' in AI Security for the second consecutive year by Gartner's AI Vendor Race. The recognition credits its Prisma AIRS AI Security Platform and strategic acquisitions (Portkey, Koi Security, Chronosphere, CyberArk) for expanding AI security, governance, IAM for AI agents, and observability. Gartner highlighted the company's large installed base and integration of acquisitions to build a broad AI security control plane spanning the enterprise AI lifecycle.

Product Launch**Fortinet****2026-07-09**

Fortinet Expands FortiGate G Series to Secure AI from Data Center to Enterprise Edge

Fortinet unveiled new FortiGate G-Series appliances, the FortiGate 3500G and 400G, extending hardware-accelerated security from data centers to modern enterprise edges. Powered by NP7/SP5 processors and FortiOS, the models secure encrypted AI-driven workloads and add native shadow AI detection for real-time visibility into unsanctioned AI usage. The appliances integrate FortiGuard AI-powered security services and unified management across Fortinet's Security Fabric, positioning them as a scalable extension of the company's enterprise edge strategy with simplified upgrade paths.

Partnership**Cisco****2026-07-09**

The R&A and Cisco Announce Multi-Year Network Infrastructure Partnership

Cisco was named the Official Network Supplier for The R&A and its championships, including The Open and the AIG Women's Open, plus the organization's new global headquarters in St Andrews. Cisco will deploy AI-ready, secure network infrastructure across events, including roughly 1,000 Wi-Fi 7 access points at The Open and C9350 smart switches, firewalls, and cloud-managed cameras at the HQ. The multi-year deal emphasizes secure, resilient connectivity for fans, broadcasters, players, and staff.

Partnership**Zscaler****2026-07-09**

Coforge Launches AI-Powered SecureEdge2Cloud Built on Zscaler Zero Trust Exchange

Coforge unveiled SecureEdge2Cloud, an AI-powered Zero Trust security offering built on Zscaler's Zero Trust Exchange platform, extending Zscaler's ecosystem reach. The solution aims to accelerate digital transformation and strengthen cyber resilience as organizations adopt cloud, AI, and modern digital technologies. Coforge also joined the next phase of Zscaler's Project AI-Guardian to enhance interoperability across the Zscaler platform and AI security portfolio, combining Zero Trust with AI-driven security and implementation expertise.

Threat Report**Check Point Software****2026-07-09**

Check Point Reports June Cyberattacks Jumped 17% Year-on-Year

Check Point reported a 17% year-over-year rise in global cyberattacks in June 2026, averaging 2,270 attacks per organization per week. Ransomware activity climbed to 646 attacks, up 33% year-over-year. The research also flagged elevated GenAI data-leakage risk, with roughly 1 in 26 enterprise GenAI prompts carrying a high risk of exposing sensitive information. Check Point highlighted a ransomware group leveraging affiliate recruitment plus a large pool of pre-exploited FortiGate devices, underscoring a rapidly shifting threat landscape.

Product Update

Cloudflare

2026-07-09

Cloudflare Ships Authentication Fix for Post-Quantum IPsec Downgrade Attack

Cloudflare announced a beta extension fixing a post-quantum IPsec downgrade vulnerability in IKEv2. The new IKE_SA_INIT_FULL_TRANSCRIPT_AUTH feature requires both peers to authenticate the entire IKEv2 handshake transcript, preventing a quantum-capable on-path attacker from stripping ML-KEM proposals and forcing weaker classical crypto. It supplements Cloudflare's hybrid ML-KEM post-quantum key exchange and is available for Cloudflare WAN and Magic Transit IPsec tunnels via a per-account feature flag, aligning with 2026 federal cryptographic guidance.

Cloudflare Announces Research Pilot with OpenAI for Real-Time AI Search Signals

Cloudflare and OpenAI launched a first-of-its-kind research pilot to test whether Cloudflare's real-time network signals can improve AI search, crawling, and indexing of the open web. By sharing signals like content freshness, traffic quality, and actual page changes, the pilot aims to enhance the accuracy and timeliness of AI-generated answers. OpenAI is the first named partner, using a single-purpose GPTBot identity, with broader access to compliant search partners planned later in 2026.

Product Launch

AWS

2026-07-09

AWS Introduces Loom, a Platform to Securely Build and Operate AI Agents at Scale

AWS introduced Loom for AWS, an enterprise-grade open-source platform to securely build, deploy, and operate AI agents at scale on Amazon Bedrock AgentCore Runtime. Loom provides a unified management UI and API, identity/provider integrations, scope-based authorization, and full lifecycle management for agents, memory, MCP servers, and A2A integrations. It emphasizes security and governance through least-privilege deployments, paved-path blueprints, cost tracking, and integration with AWS Agent Registry, with agents reviewed before production usage.

Recognition

Akamai

2026-07-09

Akamai Recognized in 2026 Gartner Peer Insights Voice of the Customer for Edge Distribution Platforms

Akamai announced it was named a 2026 Gartner Peer Insights Customers' Choice for Edge Distribution Platforms, based on 85 enterprise reviews with an overall 4.7 out of 5 rating. Highlights include 71% of reviewers awarding five stars, 91% willing to recommend the platform, and top 4.7/5 scores for Product Capabilities and Deployment Experience. Akamai framed the recognition as validation of its edge-focused delivery architectures and strong enterprise customer experience.

<https://www.globenewswire.com/news-release/2026/07/09/3324645/0/en/Akamai-Is-Recognized-in-the-2026-Gartner-Peer-Insights-Voice-of-the-Customer-for-Edge-Distribution-Platforms.html>

Partnership**Akamai****2026-07-09**

Akamai Selected as Strategic Security Partner for WWT's ARMOR AI Security Framework

Akamai was named a strategic security partner for World Wide Technology's vendor-agnostic ARMOR AI security framework, accelerated by NVIDIA. Akamai provides the core security architecture for WWT's AI factories across three pillars: offloading Guardicore segmentation to NVIDIA BlueField DPUs to cut the AI 'security tax' and speed ransomware containment, securing agentic AI and data lakes via API security, and delivering Prolexic DDoS mitigation. The goal is to isolate large-scale AI clusters, prevent lateral movement, and protect data feeding LLMs.

Recognition**Fastly****2026-07-09**

Fastly Named 2026 Gartner Peer Insights Customers' Choice for Edge Distribution Platforms

Fastly announced it was named a 2026 Gartner Peer Insights Customers' Choice for Edge Distribution Platforms, recognizing customer satisfaction with its edge cloud delivery platform. The recognition accompanied broader company updates, including the scheduling of its Q2 2026 financial results for August 5 and its move to join the DIMPACT digital sustainability coalition as the first edge cloud provider. The Customers' Choice designation reinforces Fastly's positioning in edge delivery and application performance.

Partnership**Fastly****2026-07-09**

Fastly and Skyfire Partner to Enable Trusted Agentic Commerce with Verified Identity at the Edge

Fastly and Skyfire announced a partnership to enable trusted agentic commerce with verified identity enforced at the edge. The collaboration positions Fastly's edge cloud platform as the delivery and trust layer for autonomous AI agents transacting online, adding verified-identity controls to agent-driven commerce flows. The move extends Fastly's edge capabilities into emerging agentic AI use cases, where verifying agent identity and intent at the network edge is critical for secure, scalable AI-driven transactions.

Product Launch**Citrix (NetScaler)****2026-07-09**

Citrix Launches NetScaler MCP Gateway to Govern LLM and Agentic AI Traffic

Citrix introduced MCP Gateway functionality for NetScaler, providing a centralized, governed entry point to securely route, govern, and observe enterprise AI agent traffic to backend MCP servers. Enhancements to the NetScaler AI Gateway add content-switching-based model routing and token-level usage tracking by team, user, or application. A single-pass architecture handles authentication, routing, inspection, rate limiting, and observability with low latency. The capabilities are included at no extra cost for Citrix Platform License and Universal Hybrid Multi-Cloud customers.

Product Launch

Arista Networks

2026-07-09

Arista Launches 7060XE7 Series 1.6 Tbps AI Networking Switch

Arista Networks announced the 7060XE7 Series AI networking switch, delivering 1.6 Tbps of capacity for AI rack-scale deployments. The Ethernet-based platform is already in commercial use with Meta, Microsoft, and Oracle in both air- and liquid-cooled formats, targeting AI inference and XPU workloads as customers shift away from InfiniBand. The launch drove a roughly 7% stock rally and prompted analysts at KeyBanc and Bank of America to raise price targets, reflecting continued AI-driven networking demand.

Business Update

HPE / Juniper Networks

2026-07-09

HPE's Juniper-Fueled AI Infrastructure Drives Backlog Near \$6 Billion

HPE highlighted how its Juniper Networks acquisition is accelerating its shift into an AI infrastructure provider, fueling a backlog near \$6 billion. Juniper's networking capabilities are driving larger deals for servers and storage, with networking revenue reaching \$2.7 billion in Q2 at 21.6% operating margins, contributing over 40% of total operating income. Enterprises are increasingly deploying AI on-premises and in hybrid setups, drawn to HPE's integrated stack of compute, networking, storage, and private cloud software, prompting raised full-year guidance.

Product Update

Radware

2026-07-09

Radware Enhances Agentic AI Protection with Compliance Reporting and Endpoint Protection

Radware announced an expanded update to its Agentic AI Protection product, adding AI governance and compliance capabilities. New audit-ready compliance reporting aligns with ISO 42001, the EU AI Act, and the NIST AI Risk Management Framework. The update deepens visibility into AI agent activity and dependencies and extends protection to AI agents running on developer endpoints, such as Anthropic's Claude Code, closing gaps for tools not hosted in SaaS by enabling monitoring, tool-usage governance, and data protection on local machines.

<https://www.scworld.com/brief/radware-enhances-ai-agent-security-with-compliance-reporting-and-endpoint-protection>
