Palo Alto Networks

2026-06-02

Palo Alto Networks Secures the Agentic NVIDIA AI Factory

Palo Alto Networks unveiled a security-enhanced AI factory architecture, integrating Cortex XSIAM with NVIDIA DOCA Argus for real-time, AI-powered security operations inside the NVIDIA AI Factory. Prisma AIRS (AI Runtime Security) now runs natively on NVIDIA BlueField, acting as the network enforcement engine that protects everything from raw datasets and model weights to Layer 7 micro-perimeters around autonomous agents. The combined solution delivers end-to-end observability from the data plane to the model layer with agentless visibility via a Cortex Marketplace content pack.

Prisma AIRS Drives Record Q3 as AI Security Demand Surges

Palo Alto Networks reported a record fiscal Q3, citing Prisma AIRS as the fastest-growing product in company history with over 300 customers by quarter end, up from roughly 100 in Q2, and a path toward about \$100M in ARR. Management credited platformization, AI security demand, and contributions from the CyberArk and Chronosphere acquisitions. The company raised full-year FY2026 guidance to \$11.415-\$11.425 billion in revenue, roughly 24% growth.

Product Launch

Fortinet

2026-06-02

Fortinet Advances Security Operations Platform with Unified SOC and Agentic AI

At Accelerate 2026, Fortinet announced major updates to its Security Operations Platform centered on a unified SOC architecture, agentic AI, and expanded endpoint security. Highlights include a preview of FortiSOC, a cloud-delivered service combining FortiAnalyzer, FortiSIEM, FortiSOAR, and FortiTIP, plus agentic AI that automates alert triage, investigation, and threat hunting while maintaining context across workflows. FortiEndpoint adds single-agent unification for ZTNA, SASE, EPP, EDR, and DLP, with AI-based application visibility to govern AI apps and reduce operational complexity.

Cisco

2026-06-02

Cisco Unveils Cloud Control and AgenticOps at Cisco Live

At Cisco Live US, Cisco premiered Cisco Cloud Control, a unified platform for humans and AI agents to run, monitor, and defend critical IT infrastructure, anchoring its AgenticOps operating model. The platform ties together networking, security, observability, and collaboration management with a unified data layer (Cisco Data Fabric, built on Splunk). New security innovations include Live Protect runtime vulnerability shielding with no reboots, quantum-safe communications across the core portfolio by December 2026, and AI-driven Resilient Infrastructure Services.

Cisco

2026-06-02

Cisco Launches Multicloud Fabric for the AI Era

Cisco introduced Multicloud Fabric, a network-as-a-service offering delivered through Cisco Cloud Control. It provides a single fabric for secure site-to-cloud and cloud-to-cloud networking that scales on demand and is operated by Cisco. The service is designed to simplify operations, embed security by design, and prepare networks for AI workloads, extending AgenticOps automation across multicloud environments.

Partnership

CrowdStrike

2026-06-02

EY and CrowdStrike Launch AI-Powered Agentic SOC

EY and CrowdStrike announced EY Agentic SOC, an AI-powered security operations platform built on CrowdStrike Falcon. It combines autonomous AI agents with human oversight to detect threats, analyze patterns, and act in real time, automating alert triage, pattern matching, and response orchestration. EY delivers it as a managed service with customized AI workflows, end-to-end data architecture assessment, and ongoing detection modernization, freeing security teams to focus on investigation and strategy.

CrowdStrike and NVIDIA Bring Enterprise Security to the AI Factory

CrowdStrike announced a collaboration with NVIDIA to embed enterprise-grade security into AI infrastructure by integrating NVIDIA DOCA Argus into Falcon Next-Gen SIEM. The integration extends infrastructure-level visibility across the AI factory, correlating signals from endpoints, identities, cloud, and data to deliver high-confidence detections of agent behavior anomalies, unauthorized data access, and lateral movement. CrowdStrike's Charlotte Agentic SOAR automates response workflows for machine-speed containment, with protection embedded directly into the AI data path via NVIDIA BlueField.

Acquisition

Zscaler

2026-06-02

Zscaler to Acquire Symmetry Systems for AI Data Security

Zscaler announced plans to acquire Symmetry Systems, gaining access-graph technology that maps identities, applications, and data usage across SaaS, cloud, data stores, and AI systems. The technology enables zero-trust, least-privilege policies for AI agents, tracks data lineage, detects anomalies, and assesses damage scope during compromises. The acquisition strengthens Zscaler's ability to secure AI agents by linking identities to the data and AI assets they touch.

Partnership

Zscaler

2026-06-02

Zscaler Launches Project AI-Guardian with Global System Integrators

Zscaler unveiled Project AI-Guardian, expanding partnerships with global system integrators including Cognizant, EY, HCLTech, Infosys, TCS, and Wipro to extend its AI security offerings. The initiative spans AI Asset Management, Secure Access to AI, and Secure AI Infrastructure and Apps, helping enterprises discover shadow AI, map data-identity links to AI assets, and mitigate AI-related risks across supply chain, posture, and sensitive data.

Check Point Software

2026-06-02

Check Point Launches Agentic Exposure Validation

Check Point Software launched Agentic Exposure Validation (AEV) for its Exposure Management product line, using AI agents that emulate attacker reasoning to identify which exposures are truly exploitable. AEV integrates exposure data, asset context, live exploit research, threat intelligence, and protection coverage, following a safe proving loop to validate or discard exposures and provide concrete evidence plus remediation guidance. Positioned as a core capability within Continuous Threat Exposure Management, it responds to frontier AI models now capable of autonomous exploitation.

Product Update

Cloudflare

2026-06-02

Cloudflare Adds Cron Scheduling to Workflows

Cloudflare announced that developers can now attach cron schedules directly to a Workflow binding in wrangler.jsonc. Each scheduled run automatically creates a new Workflow instance, removing the need for a separate Worker with a scheduled handler to trigger on an interval. This enables recurring tasks such as backups, invoice generation, report aggregation, and cleanup to run on defined schedules like hourly, every 15 minutes, or on weekdays.

<https://developers.cloudflare.com/changelog/post/2026-06-02-cron-workflows/>

Product Update

AWS

2026-06-02

AWS Adds ElastiCache Durability for AI Agent Memory

AWS announced a new built-in durability option for Amazon ElastiCache offering synchronous (zero data loss) or asynchronous (up to 10-second RPO) writes. The capability enables persistent, low-latency memory for AI agent context across multiple availability zones, supporting long-lived agent memory with microsecond read latency. It positions AWS's caching layer as a foundation for enterprise AI agent deployments, available across commercial, GovCloud, and China regions with Valkey 9.0.

Product Update

AWS

2026-06-02

AWS Introduces Bring Your Own Media for RDS for SQL Server

Amazon RDS for SQL Server now supports Bring Your Own Media (BYOM), letting customers migrate SQL Server workloads to managed RDS while reusing existing Microsoft licenses under Software Assurance via License Mobility. Customers upload installation media to S3 and run compatible RDS instances, with AWS License Manager tracking usage and compliance. Benefits include lower operating costs, high availability, automated backups, and monitoring across all regions where RDS is offered.

Partnership

Akamai

2026-06-02

Akamai and NVIDIA Embed Zero Trust Inside AI Factories

Akamai and NVIDIA expanded their security collaboration to embed Akamai Guardicore Segmentation into NVIDIA Vera BlueField-4 STX storage architecture via NVIDIA DOCA. The integration delivers workload-aware, Zero Trust segmentation for AI factories, protecting data, context memory, and autonomous agents at line speed by enforcing policies in silicon rather than on host systems. Guardicore Segmentation with BlueField and DOCA is expected in H2 2026, with Vera BlueField-4 STX integration on storage platforms in H1 2027.

Conference

Fastly

2026-06-02

Fastly Highlights AI Traffic and Security Momentum at William Blair Conference

At the William Blair 46th Annual Growth Stock Conference, Fastly management including CEO Kip Compton discussed Q1 results, AI-driven traffic, and traction in security products such as DDoS protection, bot management, and API discovery. Shares rose sharply as investors focused on AI-infrastructure momentum and Fastly's raised full-year revenue guidance. Management emphasized traffic engineering, platform efficiency, and demand for newer security and edge compute offerings.

Security Advisory

Citrix (NetScaler)

2026-06-02

Large-Scale Exploitation of NetScaler Memory Overread (CVE-2026-3055) Confirmed

Threat intelligence, including Fortinet, confirmed large-scale active exploitation of CVE-2026-3055, a critical memory-overread flaw in Citrix NetScaler ADC and Gateway when configured as a SAML Identity Provider. Despite a patch issued March 23, 2026, thousands of daily exploitation attempts continue against unpatched, internet-facing appliances, enabling session-token and credential leakage and session hijacking. Organizations are urged to upgrade immediately to fixed releases (14.1-60.58+, 13.1-62.23+, or 13.1-FIPS/NDcPP 13.1.37.262+).

Conference**Arista Networks****2026-06-02**

Arista Reinforces AI Networking Strategy at William Blair Conference

At the William Blair 46th Annual Growth Stock Conference, Arista Networks CFO Chantelle Breithaupt outlined the company's evolution from high-performance compute for hyperscalers and cloud toward enterprise data centers and AI strategies, guiding to roughly \$11.5 billion in revenue for the year. The presentation emphasized ongoing innovation across AI-related networking solutions, including demand for Ethernet switches, routers, and high-density optics for AI data-center fabrics.

Earnings**HPE / Juniper Networks****2026-06-02**

HPE Posts Record Quarter as Networking Soars 148% on AI and Juniper

HPE reported a record fiscal Q2 2026 with revenue up 40% to \$10.7 billion and networking revenue up 148% to \$2.7 billion, as AI infrastructure demand and the Juniper Networks acquisition drove orders to more than double. CEO Antonio Neri called the Juniper deal a 'home run,' citing accelerated Catalyst integration and AI networking bets across scale-up, scale-out, and scale-across fabrics. HPE raised full-year guidance and now expects to exceed its fiscal 2028 goals by end of fiscal 2026.

<https://www.theregister.com/on-prem/2026/06/02/hpe-declares-juniper-deal-a-home-run-as-ai-and-networking-fuel-record-quarter/5250021>

Award**HiddenLayer****2026-06-02**

HiddenLayer Achieves 'Awardable' Status in DoD Tradewinds Marketplace

HiddenLayer announced it achieved 'Awardable' status in the U.S. Department of Defense's CDAO Tradewinds Solutions Marketplace, enabling government customers to procure its AI security platform more rapidly. The designation supports DoD efforts to accelerate AI/ML procurement and deployment. HiddenLayer's platform provides detection, monitoring, and protection across the AI lifecycle against AI-specific threats, adversarial attacks, and model compromise, helping government and enterprise customers safely operationalize AI while safeguarding IP and compliance.

Report**Imperva (Thales)****2026-06-02**

Thales Warns AI Ecosystems Could Become a New Insider Threat

Thales released its 2026 Data Threat Report, warning that AI ecosystems risk becoming a new insider threat without stronger governance. The report found 70% of respondents view the pace of AI change as a security priority, over half say their AI apps are targeted by attackers, and 57% report rising AI-generated misinformation and deepfakes. It highlights identity and access management as a top discipline, credential theft as the leading cloud attack, and growing emphasis on data sovereignty and post-quantum readiness.
