Palo Alto Networks

2026-06-16

Palo Alto Networks Launches Next-Gen Security Suite for Zero-Trust Buyers

On June 16, 2026, Palo Alto Networks unveiled its Next-Gen Security Suite, a cloud-delivered, unified platform that consolidates cloud firewalls, secure web gateways, ZTNA, and endpoint analytics under a single policy engine across on-prem, remote, and multi-cloud environments. It adds AI-assisted threat detection and deep integration with Prisma and Strata, plus centralized identity, device, application, and data governance. Targeting mid-to-large enterprises as a subscription flagship, it aims to cut tool fatigue for CISOs and deliver clearer board-level risk reporting.

Palo Alto Networks and Databricks Partner to Secure Agentic AI

Palo Alto Networks and Databricks announced a joint initiative on June 16, 2026 to secure enterprise use of agentic AI. The integration embeds Prisma AIRS runtime security into the Databricks Unity AI Gateway, creating a centralized, policy-driven security layer across AI workloads, models, agents, and MCP servers. It provides real-time inspection of prompts, outputs, and tool calls, detects data-exfiltration risks including PII and PCI, and dynamically redacts or blocks sensitive data, delivering a fail-closed runtime posture that enables AI innovation while maintaining governance and compliance.

Product Launch**Fortinet**

2026-06-16

Fortinet Launches FortiSOC, an Agentic-AI Unified SOC Platform

At Accelerate 2026, Fortinet launched FortiSOC on June 16, 2026, a cloud-delivered unified security operations platform that combines SIEM, SOAR, threat intelligence, and ITDR in one SaaS console. Powered by agentic AI, FortiSOC autonomously investigates and correlates alerts across assets and identities and can recommend or execute responses under analyst oversight. Built on Fortinet's SecOps technology and FortiGuard Labs intelligence, it integrates with the Security Fabric and third-party connectors, complementing FortiAnalyzer, FortiSIEM, and FortiSOAR while scaling from small teams to large enterprises.

Fortinet Partners with NVIDIA for AI Agent Security in FortiAI Gate

Fortinet announced a strategic partnership with NVIDIA to integrate NVIDIA's AI platforms into FortiAI Gate, delivering real-time security and governance for AI workloads, data, and autonomous agents across data centers and clouds. The solution adds runtime guardrails for LLMs and protection for MCP servers and AI agents, accelerated by NVIDIA Blackwell and Hopper GPUs and Dynamo distributed inference. It offers self-hosted deployment with Nemotron safety models, multitenant isolation via Multi-Instance GPU, and flexible appliance, virtual, or container form factors across on-prem, cloud, hybrid, and edge.

Security Advisory**Cisco**

2026-06-16

Cisco Patches Actively Exploited Catalyst SD-WAN Manager Flaw (CVE-2026-20262)

On June 16, 2026, Cisco issued a security advisory for Catalyst SD-WAN Manager addressing CVE-2026-20262, an arbitrary file-write flaw that lets an authenticated attacker with write access upload crafted files via the web API and potentially escalate to root. The medium-severity bug affects all deployment types with no workarounds; Cisco urges upgrading to fixed releases and reviewing logs for suspicious uploads. CISA added it to its Known Exploited Vulnerabilities catalog with a June 29 remediation deadline. It marks the eighth Cisco SD-WAN vulnerability exploited in 2026.

Product Update

CrowdStrike ~AI

2026-06-16

CrowdStrike Extends Falcon AIDR Across Open AI Gateway Ecosystem

On June 16, 2026, CrowdStrike announced it is extending Falcon AI Detection and Response (AIDR) across a growing ecosystem of AI gateway partners, including Databricks, Google Cloud, Kong, LiteLLM, Maxim AI, Microsoft Azure, and TrueFoundry. The move positions Falcon AIDR as AI's security control plane, delivering correlated telemetry, threat detection, and inline policy enforcement across AI gateways, models, and APIs without architectural changes. It secures the AI interaction layer of prompts, responses, agents, and models against prompt injection and data exposure, and feeds Falcon Next-Gen SIEM for cross-domain detection and response.

Partnership

Check Point Software

2026-06-16

Check Point and Illumio Expand Partnership Against AI-Powered Attacks

Check Point Software and Illumio expanded their partnership on June 16, 2026 to strengthen protection and containment against frontier AI-powered attacks. The deeper integration aligns Check Point firewall policy with Illumio Segmentation, combining prevention-first perimeter defense with workload visibility and breach containment to stop attacks at the edge and constrain lateral movement inside hybrid and multi-cloud networks. Illumio Insights continues linking Check Point threat intelligence with workload context to detect east-west movement. Joint customers can now procure Illumio directly through Check Point, and the expanded integration is generally available.

Product Update

Cloudflare

2026-06-16

Cloudflare DMARC Management Reaches General Availability

Cloudflare announced on June 16, 2026 that DMARC Management is now generally available, with a redesigned experience that helps organizations reach full DMARC enforcement more easily. A single view consolidates DMARC, DKIM, SPF, and BIMI records, reducing manual DNS work. Setup requires hosting the domain's DNS on Cloudflare and enabling the feature under the Email tab. Cloudflare plans to add deeper forensic reporting, smarter recommendations, and tighter platform integration in future updates, and lets customers migrate DNS to enable DMARC Management at no extra cost.

Product Update

AWS ~AI

2026-06-16

Amazon Bedrock Guardrails Adds InvokeGuardrailChecks API for Agentic AI

AWS announced InvokeGuardrailChecks, a new resourceless Amazon Bedrock Guardrails API that lets agentic AI workflows apply per-request safeguards at any step of an iterative AI loop. It offers granular control over which checks run, with per-check severity and confidence scores spanning content filtering, prompt-attack detection for jailbreak, injection, and leakage as independent checks, and sensitive-information PII detection. The API runs in detect-only mode with no guardrail IDs or versions to manage, simplifying evolving workflows. It is available now in multiple regions including US East, US West, Europe, and Asia Pacific.

HPE / Juniper Networks

2026-06-16

HPE Expands Self-Driving Networking and AI Factory Portfolio

On June 16, 2026, HPE expanded its self-driving networking strategy and AI infrastructure, deepening Juniper integration across its AI-centric stack. New hardware includes the Juniper QFX5140 switch for AI inference clusters and edge, and a QFX5250 tray optimized for AMD's Helios rack-scale AI. Mist network management now supports HPE Networking CX switches, while Marvis AI expands into Aruba Central with agentic root-cause analysis and predictive data-center analytics. AI Factory gains NVIDIA Agent Toolkit, Nemotron models, and Confidential Computing, and HPE Private Cloud AI adds model governance and support for up to 256 GPUs.

Product Launch

Radware

2026-06-16

Radware Unveils AI Xploit Shield for Rapid Virtual Patching

Radware unveiled AI Xploit Shield on June 16, 2026, a service that rapidly generates and deploys customer-specific protections for newly discovered vulnerabilities, closing the window between disclosure and patch deployment. The AI-powered virtual patching blocks exploitation of new flaws in web applications and APIs without modifying underlying code, delivering tailored shields at scale across cloud, hybrid, and on-prem environments. As frontier AI models accelerate vulnerability discovery, the service aims to reduce operational risk and buy time for safe remediation. Radware will host a webinar titled The Mythos Effect: Closing the AI-Driven Exposure Window.
