Palo Alto Networks Expands Unit 42 Frontier AI Capabilities with OpenAI Cyber Models

Palo Alto Networks announced it is putting frontier OpenAI cyber models, including GPT-5.6 Daybreak, to work for defenders through expanded Unit 42 capabilities. The new Frontier AI Exposure Analysis service scales exposure discovery, validates exploitability, maps attack paths, and prioritizes remediation. Unit 42 experts pair the frontier models with Palo Alto telemetry and threat intelligence to test findings and build custom remediation plans, aiming to help customers close the most impactful attack paths before adversaries can weaponize them.

Product Launch**Fortinet**

2026-08-12

Fortinet Advances Its Security Operations Platform with Unified SOC, Agentic AI, and Expanded Endpoint Security

Fortinet announced major advances to its Security Operations platform, previewing FortiSOC, a cloud-delivered SOC service unifying FortiAnalyzer, FortiSIEM, FortiSOAR, and threat intelligence under one data model and console. FortiAI adds agentic workflows that automate alert triage, investigation, and threat hunting using Model Context Protocol for cross-workflow context. Fortinet also expanded MDR and FortiGuard-as-a-Service coverage and upgraded FortiEndpoint with a single agent spanning ZTNA, SASE, EPP, EDR, and DLP, plus AI-driven application visibility and simplified licensing.

Fortinet Report: Cloud Attackers Now Weaponize New Vulnerabilities Within 24 Hours

Fortinet published research finding that cloud-focused attackers now weaponize newly disclosed vulnerabilities within roughly 24 hours, collapsing the window defenders have to patch. The report highlights AI- and automation-assisted exploitation at scale, heavy abuse of stolen identities and legitimate tools rather than novel malware, and rising risk across cloud and hybrid environments. Fortinet urges faster remediation cycles, stronger identity protection, and automated response to close the widening speed gap between attackers and security teams.

Cisco Reports Record Fourth Quarter and Fiscal Year 2026 Earnings

Cisco reported Q4 FY2026 revenue of \$17.3 billion, up 18% year over year, with GAAP EPS of \$0.97 and non-GAAP EPS of \$1.22. Full-year revenue reached \$63.3 billion, up 12%. Q4 product orders rose 35%, and hyperscaler AI infrastructure orders totaled \$4 billion in the quarter, bringing FY2026 AI infrastructure orders to \$9.3 billion. Cisco guided FY2027 revenue to \$72.2-\$73.4 billion and targets roughly \$7.5 billion of AI infrastructure revenue.

Security Advisory**Cisco**

2026-08-12

Cisco Patches Actively Exploited Secure Firewall Zero-Day (CVE-2026-20349)

Cisco released hotfixes for CVE-2026-20349, a zero-day in Secure Firewall ASA and FTD that lets a remote, unauthenticated attacker reload an appliance and cause denial of service via crafted HTTP requests to the Remote Access SSL VPN service. Cisco confirmed active exploitation in August 2026 and urged immediate patching. CISA added the flaw to its Known Exploited Vulnerabilities catalog and directed federal agencies to remediate by August 14, making it Cisco's twelfth 2026 CVE added to KEV.

Cisco Joins Nvidia and Peers on SAFE Framework for AI Agent Security Incident Reporting

Cisco joined Nvidia and other vendors in proposing SAFE, a joint industry framework for standardized reporting of AI agent security incidents. The proposal defines timelines for disclosing agent breaches, including confidential initial reports within four business days, preliminary facts within 30 days, and corrective actions within 90 days. Backers compare SAFE to flight recorders for AI agents, capturing agent actions to drive industry-wide controls. The draft is open for industry and research feedback through a Linux Foundation-run process.

CrowdStrike Threat Hunting Report: Cloud-Conscious eCrime Surges 171% as Attackers Exploit Trust

CrowdStrike research showed cloud-focused eCrime activity rose 171% in the first half of 2026, with financially motivated actors targeting cloud credentials, compute resources, large language models, and digital assets. Attackers increasingly enter through trusted accounts, tokens, applications, and software components, operating inside cloud and SaaS environments as legitimate activity. Voice-phishing intrusions doubled and device-code phishing attempts rose fifteenfold over six months, signaling a shift from credential theft to cross-domain attacks leveraging identity and supply chain trust.

CrowdStrike Named a Leader in 2026 IDC MarketScape for Worldwide MDR/MXDR

CrowdStrike was named a Leader in the IDC MarketScape: Worldwide MDR/MXDR for the Enterprise 2026 Vendor Assessment. The report highlights Falcon Complete's agentic MDR capabilities, which use AI and specialized agents under analyst oversight to orchestrate end-to-end investigation and response with a median time to containment of roughly one minute. Cited strengths include human-in-the-loop AI, platform consolidation with cross-domain visibility across endpoints, identities, cloud APIs, network egress and email, and elite threat intelligence.

Check Point Software Reports 2026 Second Quarter Financial Results

Check Point Software Technologies released financial results for the second quarter ended June 30, 2026, publishing full financial tables alongside its earnings announcement and hosting its quarterly investor call. The report caps a period in which the company pushed its AI Defense Plane, AI Network Firewall and Agentic Exposure Validation into the market, and investors focused on whether AI security demand is translating into subscription growth and a stronger 2027 setup.

Check Point Researchers: AI Has Crossed into the Live Attack Chain

Check Point Research findings detailed this week show AI has moved from assisting attackers to operating inside live intrusions, spanning reconnaissance, malware development, vulnerability research, attacker tooling and social engineering. Researchers documented AI autonomously running exploitation workflows across dozens of sessions with minimal human input, including a ransomware crew building its management tool in three days. Check Point warns enterprises deploying their own AI are expanding attack surface faster than their security practices can adapt.

Signal Taps Cloudflare to Help Protect the Privacy of Hundreds of Millions of Users Through Key Transparency

Cloudflare was named an independent Key Transparency auditor for Signal's new Automatic Key Verification feature. Cloudflare periodically verifies that Signal's Key Transparency log updates are cryptographically consistent, signs valid updates, and lets users confirm a globally consistent view of encryption keys without leaving the app, blocking split-view and man-in-the-middle key-swap attacks. Cloudflare says it never sees phone numbers, usernames, public keys or message content. The role follows its existing auditor work for WhatsApp.

Product Launch**AWS**

2026-08-12

AWS IAM Now Provides Role Manager to Set Up IAM Roles Automatically

AWS announced general availability of role manager in IAM, which automatically creates default IAM roles when customers set up supported AWS services in the console, or reuses existing matching roles. Administrators can enable or disable role manager at any time and inspect the AWS-managed templates it deploys. It initially supports six services including AWS Lambda and Amazon EventBridge, with generated roles behaving as standard IAM roles that can be refined later using IAM Access Analyzer.

AWS Unveils Amazon Quick Enterprise AI Assistant for the Korean Market

AWS introduced Amazon Quick, an enterprise AI assistant that connects corporate data to work applications through more than 40 integrations including Slack, Salesforce and Google Workspace, letting employees analyze data and automate tasks with natural-language commands. AWS cited six months of internal validation across 200,000 employees and more than 300,000 automated tasks, cutting report creation from about three hours to five minutes. Korean customers including Black Yak and Megazone Cloud are already deploying it.

Mindgard Raises \$30M Series A to Scale Enterprise AI Security and Red Teaming

Mindgard announced a \$30 million Series A led by Album VC, with new investor Karma Ventures joining existing backers .406 Ventures, Atlantic Bridge, IQ Capital and Lakestar, bringing total funding to roughly \$42 million. The Boston- and London-based Lancaster University spin-out will scale product, engineering, sales and marketing as enterprises push AI into production. Its platform combines Shadow AI discovery, automated AI red teaming and runtime protection across models, agents and applications, and has surfaced over 150 high-impact AI vulnerabilities.

Product Launch**A10 Networks**

2026-08-12

A10 Networks Launches A10 AI Gateway, an Intelligent Control Plane for Enterprise AI Operations

A10 Networks announced general availability of the A10 AI Gateway, a centralized control plane that routes AI requests, tracks costs in real time, and governs access across all AI agents, applications, and LLMs an organization uses. Features include smart per-request routing to the most suitable model, per-model and per-team budgets with alerts, centralized traffic visibility, and integration with A10's TrojAI-based AI security portfolio. Unveiled at Black Hat 2026, it deploys entirely within the customer's environment to preserve data sovereignty.

Award**Barracuda Networks**

2026-08-12

Barracuda Honored with Four Wins in 2026 CRN Annual Report Card Awards

Barracuda Networks announced it received four wins in CRN's 2026 Annual Report Card (ARC) Awards: Security Email and Web (Support Winner), Security Endpoint Protection/EDR (Managed & Cloud Services Winner), and Storage Data Recovery/Observability/Resiliency (Partnership Winner and Managed & Cloud Services Winner). The ARC rankings are based on direct feedback from solution providers evaluating vendors on product innovation, support, partnership, and managed/cloud services. Barracuda credited its partner-first strategy and the BarracudaONE platform.
