Palo Alto Networks and Deutsche Telekom Launch Sovereign Cortex with T Security for European Regulated Industries

Palo Alto Networks and Deutsche Telekom announced Sovereign Cortex with T Security, a joint AI-driven SecOps solution that brings Cortex capabilities to Europe's regulated industries with strong data sovereignty controls. Deutsche Telekom acts as an independent European trust partner, governing telemetry data, encryption keys, and independently audited access logs entirely within Europe. Designed to address NIS2, DORA, GDPR, and KRITIS compliance, initial rollout targets healthcare, financial services, and public-sector organizations in Q3 2026.

2026-06-09

Fortinet Discloses Critical FortiSandbox Vulnerability (CVE-2026-25089) Enabling Unauthenticated Remote Command Execution

On June 9, 2026, Fortinet disclosed a critical OS command injection flaw (CVE-2026-25089, CVSS 9.1) in FortiSandbox, FortiSandbox Cloud, and FortiSandbox PaaS that lets unauthenticated remote attackers execute arbitrary commands through the web UI. Affected versions include FortiSandbox 5.0.0-5.0.5 and 4.4.0-4.4.8; fixes ship in 5.0.6 and 4.4.9 or above. Fortinet urges immediate upgrades, restricting web UI access to trusted IPs, and monitoring for anomalous requests.

Cisco Pushes Unified Security and Networking via Cloud Control Platform and Expanded LiveProtect

In a June 9, 2026 post, Cisco emphasized fusing security and networking through Cisco Cloud Control, a unified platform combining networking, security, compute, observability, and collaboration across the stack. The company highlighted expanded LiveProtect coverage across firewalls, SD-WAN, secure routers, and campus switching, delivering rapid protection against vulnerabilities without downtime. Cisco framed the consolidated, AI-ready approach as the fastest path to partner profitability and recurring revenue.

CrowdStrike 2026 Technology Threat Landscape Report: China-Nexus Adversaries Target AI Capabilities

CrowdStrike released its 2026 Technology Threat Landscape Report on June 9, 2026, finding that China-nexus adversaries drive over 58% of state-sponsored intrusions into the technology sector as they seek to steal AI capabilities and IP. DPRK-linked FAMOUS CHOLLIMA accounted for 47% of state-sponsored intrusions via AI-enhanced fake personas, while eCrime made up 65% of interactive tech-sector intrusions. The report warns adversaries are weaponizing AI to scale attacks and compromise developer supply chains.

Seattle Sounders FC Selects CrowdStrike and Redapt to Strengthen Cyber Resilience Ahead of FIFA World Cup 2026

CrowdStrike announced that Seattle Sounders FC selected CrowdStrike and Redapt to bolster cyber resilience ahead of the FIFA World Cup 2026. The engagement includes advisory services, a Redapt virtual CISO, and an AI-native approach using CrowdStrike Falcon Complete for 24/7 managed detection and response. The goal is to simplify security operations, improve visibility, and reduce risk as the club scales for heightened global attention.

Zscaler Unveils Zero Trust Platform for Agentic AI with AI Broker, Endpoint AI Security, and AI Access Graph

At Zenith Live 2026, Zscaler announced what it calls the industry's first complete Zero Trust platform for agentic AI. New AI Broker secures Model Context Protocol (MCP) and agent-to-agent communications with an agent registry, while Endpoint AI Security protects devices from browser, plugin, and local AI-tool threats. The AI Access Graph (powered by the Symmetry Systems acquisition) maps identities, apps, and data, and expanded AI Protect adds MCP red teaming, prompt hardening, and compliance heat maps.

Check Point Issues Emergency Advisory for Actively Exploited VPN Zero-Day (CVE-2026-50751) Linked to Qilin Ransomware

On June 9, 2026, Check Point warned of a critical VPN zero-day (CVE-2026-50751, severity 9.3) that lets unauthenticated attackers establish VPN sessions without valid credentials due to a certificate-validation flaw. Exploitation has been observed since May 7, with activity tied to a Qilin ransomware affiliate. CISA added the flaw to its Known Exploited Vulnerabilities catalog and ordered federal agencies to patch by June 11. Check Point released emergency hotfixes and urged migration to IKEv2 and certificate authentication.

Cloudflare Details 'Customer Zero' Architecture to Defend Against Frontier Cyber AI Models

In a June 9, 2026 post, Cloudflare described how it uses its own products as 'customer zero' to defend against frontier cyber AI models, integrating Cloudforce One threat intelligence directly into the WAF to block high-risk traffic within seconds. New cf.intel fields let customers automate real-time protection against specific threat actors and industries. Cloudflare said protection rules can propagate across its global network in under 30 seconds for emerging threats.

Cloudflare Ships WAF Update with New Protections for Drupal, Magento, and Axios Vulnerabilities

Cloudflare's June 9, 2026 WAF release added managed-rule protections for several newly disclosed vulnerabilities, including SQL injection in Drupal with PostgreSQL (CVE-2026-9082), PHP Object Injection in Mirasvit Cache Warmer for Magento/Adobe Commerce (CVE-2026-45247), and prototype pollution in Axios (CVE-2026-40175). A generic detector for obfuscated boolean-logic SQL injection was also introduced. The rules block malicious payloads at the edge to prevent unauthenticated code execution and data manipulation.

Cloudflare Adds Spend Limits and Identity-Driven Budgets to AI Gateway

Cloudflare expanded its AI Gateway with an open beta for spend limits-dollar budgets that track total AI usage across requests independent of rate limits-to help organizations control runaway AI costs. A closed beta adds identity-driven budgets and policies, attributing each request to a user, IdP group, or service and enforcing budgets by model, provider, or custom attributes. The features give enterprises finer governance over AI traffic flowing through the gateway.

AWS Launches FinOps Agent in Preview for AI-Powered Cloud Cost Management

AWS announced the preview of AWS FinOps Agent, an AI-powered assistant that helps FinOps and engineering teams answer cost questions, generate cloud cost reports, and surface rightsizing, idle-resource, and Savings Plans recommendations. It automatically investigates cost anomalies with root-cause analysis, integrates with Slack for notifications, and can open Jira tickets on a user's behalf. Available in US East (N. Virginia) covering all regions except GovCloud and China, with no charges during preview.

AWS Makes Claude Fable 5 Generally Available, the First Mythos-Class Model on Bedrock

On June 9, 2026, AWS announced general availability of Claude Fable 5, the first generally available Mythos-class model, delivering state-of-the-art autonomy for knowledge work and coding. It is accessible two ways: via Amazon Bedrock, where data stays within AWS with Guardrails, Knowledge Bases, and regional residency; or through the Anthropic-managed Claude Platform on AWS with unified billing and authentication. Fable 5 can run extended, complex tasks with minimal intervention, including self-updating skills and self-verification.

Akamai Warns Post-Quantum Cryptography Could Break DNS, Pitches DNS Posture Management

In a June 9, 2026 article, Akamai warned that post-quantum cryptography will enlarge DNS signatures, breaking the single-UDP-packet assumption and forcing TCP fallbacks that risk latency spikes and broken automation amid rising agentic AI-driven query volumes. The company stressed crypto-agility challenges across fragmented multicloud environments and recommended mapping DNS configurations, dependencies, and cryptographic exposures. Akamai positioned its DNS Posture Management as the starting point for PQC readiness and quantum-safe migration.

RESEARCH REPORT**Fastly ~AID**

2026-06-09

Fastly Research: AI Traffic Grew 6.5x Faster Than Human Traffic in 2026

Fastly published research on June 9, 2026 showing AI-driven traffic on its network grew about 30% from January to May—roughly 6.5x faster than human traffic. AI requests split into crawlers (85%) and fetchers (15%), and over 51% reach origin servers versus under 9% for human requests, hitting origins six times more often per request. Fastly urged a 'machine traffic strategy' built on edge visibility, context, and precise, intent-based responses.

Arista Introduces 7060XE7 Series, a 1.6Tbps Portfolio for Rack-Scale AI Fabrics

On June 9, 2026, Arista Networks unveiled the 7060XE7 Series, a next-generation 1.6 Tbps portfolio built on Broadcom Tomahawk 6 silicon with 224G SerDes, designed as the foundation for rack-scale AI infrastructure scaling from thousands to hundreds of thousands of XPU. The lineup spans air-cooled and liquid-cooled models and uses Linear Pluggable Optics to cut interconnect power roughly 60%. Arista positions it as an open, Ethernet-based scale-up and scale-out fabric, with availability beginning Q4 2026.

Barracuda Pairs SecureEdge DNS Access with Managed XDR for Layered Workstation Resilience

In a June 9, 2026 post, Barracuda outlined a two-layer workstation resilience approach combining SecureEdge DNS Access with Barracuda Managed XDR Endpoint Security. SecureEdge provides pre-execution protection by blocking malicious destinations and monitoring shadow AI usage, while Managed XDR delivers SOC-managed detection, automated response, and rapid host containment. The BarracudaONE platform unifies user governance and endpoint activity to close gaps across the full attack chain.
