Palo Alto Networks Champions 'Secure AI by Design' for Malaysian Enterprises at Ignite on Tour KL

At Ignite on Tour Kuala Lumpur on June 22, 2026, Palo Alto Networks urged Malaysian enterprises to embed security into AI from day one through a 'Secure AI by Design' approach built to counter machine-speed threats. Executives Nicole Quinn and Sarene Lee highlighted reducing tool sprawl—enterprises average 83 security products from 29 vendors—by adopting unified, AI-powered platforms. The message tied to Malaysia's AI Governance Bill and stressed integrated protection across users, apps, and AI environments to preserve trust and resilience as GenAI deployments accelerate.

Check Point to Embed OpenAI Frontier Cyber Capabilities into Its Security Products

Check Point announced on June 22, 2026 an expansion of its OpenAI partnership, joining the OpenAI Daybreak Cyber Partner Program to embed OpenAI frontier cyber capabilities directly into Check Point's security products, workflows, and managed services. The integration aims to strengthen threat prevention, accelerate remediation, and improve security operations. Check Point said the rollout will be gradual, beginning with controlled defensive uses and expanding as safeguards prove effective, emphasizing responsible use, abuse prevention, and measured enterprise deployment.

Cloudflare Launches Cloudflare One Design Partner Designation

On June 22, 2026, Cloudflare introduced the Cloudflare One Design partner designation, calling it its deepest channel co-investment to date. The program equips a select group of partners—including Arctiq, Consortium, CMT, Presidio, and The Missing Link—with training, financial runway, and a library of blueprint configurations and automated workflows to deploy Cloudflare One's SASE offering. Partners gain agent-ready workflows and decision-tree tooling for faster, higher-value migrations. Cloudflare aims to concentrate on fewer, elite partners while expanding services partnerships and revenue per partner.

Cloudflare and Major Browsers Develop PACT to Replace CAPTCHAs

Cloudflare announced on June 22, 2026 a collaboration with Mozilla, Google, Microsoft, and Shopify to develop Private Access Control Tokens (PACT), a privacy-first protocol for proving legitimate human and agent traffic without invasive tracking or CAPTCHAs. Building on the Privacy Pass framework (RFC 9576), PACT lets sites issue anonymous cryptographic tokens browsers can present to attest personhood, reducing friction while preserving privacy and extending coverage to AI-agent traffic. The effort seeks open-web standardization, though no formal standards body, timeline, or deployment schedule has been set.

AWS Introduces Lambda MicroVMs for Isolated Execution of User and AI-Generated Code

AWS announced general availability of Lambda MicroVMs on June 22, 2026, a new serverless compute primitive offering VM-level isolation for running user- or AI-generated code. Built on Firecracker, each session runs in its own MicroVM with near-instant launch and resume, stateful execution for up to eight hours, and dedicated HTTPS URLs supporting HTTP/2, gRPC, and WebSockets. It targets multi-tenant scenarios needing strong per-user isolation. Availability spans US East (N. Virginia, Ohio), US West (Oregon), Asia Pacific (Tokyo), and Europe (Ireland), with up to 16 vCPUs per MicroVM.

AWS Adds Grok 4.3 to Amazon Bedrock

As part of its June 22, 2026 updates, AWS made the Grok 4.3 model available in Amazon Bedrock, expanding its managed model-serving catalog. Grok 4.3 brings enhanced reasoning for agentic and enterprise workflows and an updated inference engine for improved price/performance, with support for tool calling, structured output, and response streaming. The addition strengthens Bedrock's role as a unified AI inference and model-delivery platform, giving enterprises more frontier-model choice for building production AI applications and agents on AWS infrastructure.
