Palo Alto Networks Named a Leader in the 2026 Gartner Magic Quadrant for Privileged Access Management

Palo Alto Networks said its Idira PAM platform is a Leader in the 2026 Gartner Magic Quadrant for Privileged Access Management for the eighth consecutive time, placed furthest in Completeness of Vision. Idira combines vaulted access, zero standing privileges, secrets management, workload security and identity governance. It now covers non-human identities, including cloud, apps, Kubernetes and AI agents, with native SPIFFE/SVID support for short-lived cryptographic identities. It also integrates with Palo Alto's threat detection, AI security and threat intelligence.

Product Launch | Palo Alto Networks | 2026-10-26 | AI Security

Palo Alto Networks Unveils Cortex XDR One to Reinvent Endpoint Security for the Agentic AI Era

Palo Alto Networks launched Cortex XDR One, which combines extended detection and response (XDR) with Cortex Agentic Endpoint Security in a single sensor. It protects both enterprise hosts and autonomous AI agents such as copilots, MCP servers and personal AI tools. Capabilities include a real-time AI inventory, shadow AI visibility, runtime guardrails plus OS-level enforcement against prompt injection, and small language models that run on the sensor for offline detection. The company claims up to 95% fewer false positives. Customers can run it standalone alongside third-party EDR or inside full XDR One, with optional Unit 42 MDR.

Other | Fortinet | 2026-10-26 | Platforms

Fortinet Patches Critical FortiOS Flaws Found with AI Help

Fortinet released security hardening updates for FortiOS, FortiManager, FortiAnalyzer, FortiMail and FortiAuthenticator. The updates fix critical and high-severity flaws found through AI-assisted testing and confirmed by humans. Some of the flaws may be remotely exploitable without authentication. Fortinet is withholding vulnerability details until November 10, 2026, and urges immediate upgrades, especially for internet-facing systems. The testing covered more than 100 tests across 30 product families. These fixes do not address the separate PHP2Shell vulnerabilities.

Product Launch | Fortinet | 2026-10-26 | AI Security

Fortinet Expands AI Security with the FortiGuard Inline AI Security Service

Fortinet launched the FortiGuard Inline AI Security Service, a cloud-delivered service that adds AI-specific inspection and guardrails to FortiGate firewalls. It applies real-time guardrails to prompts, model responses, MCP tool calls, API activity and agent actions, and inspects text, images, audio, video and code. Other features include data loss prevention for AI traffic, shadow AI visibility and more than 50 predefined policies. The underlying FortiAIGate gateway can also be self-hosted on Kubernetes with NVIDIA GPUs for data sovereignty. It incorporates technology from Fortinet's August acquisition of Virtue AI.

Partnership | Cisco | 2026-10-26 | Platforms

Cisco Expands Partner Opportunity with New Cisco 360 Program Updates, High Yield Customer Experience Offerings, and AI-Ready Innovations

At Cisco Partner Summit, Cisco announced updates to its Cisco 360 Partner Program, including Ecosystem Deal Registration and new Advisor and Developer value indexes (PVIs). Partner incentives now include 50% higher annual contract value (ACV) growth rewards and a 2% cross-sell bonus for net-new Cisco architectures, including Splunk. Cisco IQ for Partners is now generally available with a new adoption incentive. Cisco also expanded Cisco Cloud Control with tools to build, secure and run AI-ready infrastructure.

Cisco Rethinks Privileged Access with Privileged Infrastructure Access

Cisco announced Privileged Infrastructure Access, which replaces static credentials with on-demand, short-lived privileges tied to a user's or AI agent's cryptographic identity. Sessions are recorded and privileges expire when the task ends. It extends existing Cisco ISE and TACACS+ policy and device context to routers, switches, servers, Kubernetes and cloud resources. Cisco positions it as defense against AI-driven threats, with clear audit trails for infrastructure work.

Introducing Cisco Model Foundry: Bringing AI to Our Partners

Cisco introduced Model Foundry, a platform service in Cisco Cloud Control that lets partners discover, evaluate, fine-tune and run Cisco's domain-specific AI models and open models on customer data. It offers an OpenAI-compatible API, tenant-scoped keys and usage visibility. The model catalog includes Deep Network 1.4, Antares-3B and Cisco Time Series Model 1.0. An early-access group (AWS, Microsoft, Baseten, Fireworks, Ollama, WWT and others) gets hosted inference and model weights ahead of new releases. Model Foundry enters Controlled Availability now.

Product Launch | Check Point Software | 2026-10-26 | Platforms

Check Point Launches Firewall-as-a-Subscription to Put Advanced AI-Era Protection Within Reach of Every Organization

Check Point launched Firewall-as-a-Subscription, which lets customers get Check Point Force Firewalls without buying the hardware upfront. The bundle includes the R82.20 AI Network Firewall, AI-powered threat prevention (SandBlast, which Check Point says blocks 99.9% of zero-days), Live Updates and cloud-based Smart-1 Agentic Management. It is a three-year term paid monthly or annually. Customers can raise throughput at any time, refresh hardware after 36 months, and get 24/7 premium support plus Flex Credits for policy migrations from other vendors. It is sold through partners starting November 1, 2026, and is aimed at organizations with tight budgets.

Know Who Uses AI, and How: Check Point Adds AI User Insights to Workforce AI Security

Check Point added AI User Insights to its Workforce AI Security product. It gives security teams a per-user profile of AI activity. Each one-click profile shows an AI-generated summary of the user's role, the AI tools they use, their top use cases and risky events, including DLP events. It also suggests an organizational classification, such as Developer or IT, which admins can edit. Prompt content is not shown; the profiles cover patterns, tools and risk events only. The goal is to help teams prioritize shadow-AI risk and govern employee AI adoption.

Research | Cloudflare | 2026-10-26 | AI Data Delivery

Cross-request KV cache exposure in the GLM-5.3 Workers AI model, and our remediation with SGLang

Cloudflare disclosed that its GLM-5.3 Workers AI inference service returned fragments of other customers' requests in 155 responses between August 27 and September 9, 2026. Two problems combined to cause it. The model advertised a 1,048,576-token context, but the prefill KV cache pool held only about 681k tokens. On top of that, an SGLang bug in disaggregated prefill/decode mode transferred stale KV pages. Cloudflare enlarged the prefill pool to about 2.04M tokens, made the rejection path safe, added decode-side checks and submitted fixes upstream to SGLang.

Product Launch | AWS | 2026-10-26 | Platforms

AWS IAM Identity Center now supports cross-Region trusted identity propagation

AWS IAM Identity Center now carries a user's identity with their requests across AWS Regions. Services spread across Regions can therefore apply fine-grained access control and audit actions against the actual user. Previously, customers had to keep services in the same Region or use broad-permission workarounds. The feature costs nothing extra and is available in every Region where IAM Identity Center runs.

Product Launch | AWS | 2026-10-26 | AI Data Delivery

OpenAI GPT-6.1 Terra is now generally available on Amazon Bedrock

AWS made OpenAI GPT-6.1 Terra generally available on Amazon Bedrock. AWS says it improves on GPT-5.6 Terra in factuality, visual reasoning and task speed. Token costs are at least 50% lower than GPT-6.1 Sol and GPT-5.6 Terra. The model supports a context window of up to 1M tokens and both text and image inputs. It runs on the Bedrock inference engine for enterprise workloads such as building cross-system agents and investigating codebases.

Product Launch | AWS | 2026-10-26 | Application Security

AWS Weekly Roundup (October 26, 2026): AWS Continuum GA, TorchNeuron for Trainium, and more

AWS's October 26 weekly roundup leads with the general availability of AWS Continuum in US East (N. Virginia) and US West (Oregon). Continuum builds a context graph linking code repositories to running AWS assets and ranks vulnerabilities by attack-path risk. It reproduces exploitable issues in an isolated sandbox and delivers fixes as pull requests that need human approval. The roundup also covers schema-compliant structured outputs for Claude on Bedrock, a public beta of TorchNeuron for Trainium, and new Amazon Polly generative voices.

Partnership | Akamai | 2026-10-26 | Application Security

Scalefusion Secures Global SaaS Growth with Akamai as Cyberattacks Surge

Akamai announced that endpoint-management SaaS provider Scalefusion uses Akamai App & API Protector to secure its multicloud platform, which serves more than 12,000 businesses in 120 countries. Over 90 days, Akamai blocked more than 515 million attacks across 34 billion requests, and Scalefusion kept 99.95% uptime. The deployment includes AI-driven WAF tuning, automated certificate management through DigiCert, SIEM and observability integrations, and usage-based pricing that grows with traffic.

Research | Akamai | 2026-10-26 | Application Security

Silent Agents Are Already on Your Site

Akamai warns that "silent agents" are already on customer sites: AI or automated activity inside real browser sessions that carries no verifiable identity. Akamai says blocking all of it hurts customers, while allowing all of it raises risk. It proposes a three-step framework: visibility, insight, then selective action set per endpoint. Content endpoints can mostly allow AI traffic, transaction endpoints should score every request for automation, and authentication endpoints should verify the account holder. Akamai cites the Web Bot Auth identity work at the IETF as the longer-term fix.

Fastly Resolves On-the-Fly Packaging Outage Causing 503 Errors

On October 26, Fastly's status page reported 503 errors in its On-the-Fly Packaging streaming service, part of its CDN. The issue started at 16:36 UTC, a fix was deployed by 19:05 UTC, and it was resolved at 19:13 UTC. Fastly said the service was degraded for about two hours and other services were not affected.

Research | Citrix (NetScaler) | 2026-10-26 | Application Delivery (ADCs)

Report: Critical NetScaler Flaws CVE-2026-88771 and CVE-2026-88772 Actively Exploited

SecurityTabs reports that two critical NetScaler ADC/Gateway flaws are being exploited in the wild. CVE-2026-88771 allows remote code execution without logging in, and CVE-2026-88772 is a memory overflow that can lead to remote code execution or denial of service. Both are on CISA's Known Exploited Vulnerabilities list. Rapid7 found an intrusion that chained CVE-2026-88771 with CVE-2026-88779 to get root access, install web shells and steal data. The guidance is to patch quickly and treat exposed, unpatched appliances as potentially compromised.

Research | Arista Networks | 2026-10-26 | AI Data Delivery

Analysis: Arista Uses Broadcom Silicon and Etherlink AI Fabrics to Challenge Nvidia InfiniBand

A 24/7 Wall St. analysis says Arista is winning AI infrastructure deals that used to go to Nvidia's InfiniBand, using open Etherlink Ethernet fabrics built on Broadcom silicon. It cites Arista's first $3B quarter (+37.7% revenue growth), a 2026 outlook of about $12.6B, and more than 100 Etherlink AI fabric customers. Risks it names include heavy reliance on Microsoft and Meta, dependence on a single silicon vendor, and a high valuation.

Product Launch | HPE / Juniper Networks | 2026-10-26 | AI Data Delivery

HPE Juniper Publishes Junos OS Release 26.2R1 with New EX5200 Switches and Telemetry Features

HPE Juniper Networking published Junos OS Release 26.2R1, dated October 26, 2026. It adds OpenConfig-based telemetry to ACX Series routers, including BGP support and regular reporting on interfaces, processes and memory. It also supports the new EX5200 campus switch family (24- and 48-port, with and without PoE), which can run standalone or in Virtual Chassis for campus access and fabric deployments.

Radware Cloud WAF Incident Hits North America Ashburn and Chicago Regions

Radware posted an incident notice for its Cloud WAF service in the Ashburn (ASH) and Chicago (ORD) regions on October 26, 2026. Updates through the afternoon said the problem appeared limited to Ashburn, and Radware worked with third-party ISPs to fix it. The incident was marked resolved at about 8:46 PM ET. Radware reported no confirmed customer impact and asked affected customers to open support cases.

Barracuda Lists Top 7 Email Security Threats Facing Businesses in 2026

A Barracuda blog post published October 26, 2026 lists the main email-borne threats for 2026. These include AI-generated and spear phishing, business email compromise, account takeover, data loss and insider threats, and ransomware delivered by email. Barracuda recommends layered defenses: email authentication, MFA, AI-powered detection, user awareness training, reliable backups and automated incident response.
