Palo Alto Networks Unveils Idira Identity Security Platform Following CyberArk Acquisition

Palo Alto Networks announced a strategic shift toward identity security, launching Idira, a next-generation platform built on its CyberArk acquisition. Idira secures human, machine, and AI agent identities with dynamic access, continuous governance, and real-time control. The move makes identity a foundational pillar of the company's platformization strategy for AI-enabled environments, with partners encouraged to expand advisory roles beyond single-domain security across cloud, SASE, and SecOps.

Palo Alto Networks Positions Prisma Browser as Core of Its Identity Strategy

Palo Alto Networks detailed how Prisma Browser anchors its identity strategy. Leveraging AppID technology, Prisma Browser cross-references traffic against a 100,000+ application database to give admins real-time security context, including risk levels, compliance, IAM integration, and quantum readiness, in an Application Usage dashboard. Available as a standalone secure browser, mobile app, or extension for Chrome, Edge, and Safari, it provides visibility into every authentication event without complex proxies or integrations.

Palo Alto Networks Deploys Quantum-Safe Security at Black Hat Asia 2026

Palo Alto Networks shared results from deploying its Quantum Safe Security (QSS) offering at Black Hat Asia 2026. Using Next-Generation Firewalls and XSIAM powered by Strata Cloud Manager, QSS secured a segmented event network while producing a live cryptographic Bill of Materials. The company argues the post-quantum transition is active now, urging enterprises to use NGFWs as active sensors to monitor crypto hygiene against harvest-now-decrypt-later risks.

Fortinet

Tue, Jun 30, 2026

Fortinet Launches FortiSOC, a Unified SOC Platform Powered by Agentic AI

Fortinet announced the general availability of FortiSOC, a cloud-delivered SOC platform combining SIEM, SOAR, threat intelligence, and ITDR into a single SaaS console. Powered by FortiAI-Assist using Model Context Protocol, it autonomously investigates alerts, correlates activity across identities and assets, generates response playbooks, and proposes or executes actions under analyst oversight. Built on FortiGuard Labs intelligence, FortiSOC aims to reduce tool sprawl and scale security operations for organizations of all sizes.

Fortinet Expands Use of Frontier AI in Security Testing

Fortinet detailed its expanded, permanent integration of frontier AI models, including Anthropic and OpenAI systems, alongside on-premises models to augment security testing across its SDLC. AI now assists malware analysis, AI-guided fuzzing, penetration testing, and code analysis at scale. Fortinet says the approach addresses shrinking time-to-exploit windows and cybersecurity hiring gaps, and reaffirmed its commitment to secure-by-design transparency with published security enhancements based on vulnerability severity.

Product Launch

Cisco

Tue, Jun 30, 2026

Cisco Introduces Policy Studio in AI Defense at Cisco Live

Cisco announced Policy Studio, an AI assistant within Cisco AI Defense that helps teams build custom, adaptive guardrails for security policies. Using multiagent orchestration, an orchestrator agent coordinates specialized subagents to gather insights, refine policies, and publish them to runtime enforcement. The

system leverages user-provided evidence and interactive insights in a control console, enabling iterative refinement for edge cases and evolving threats across domains.

Product Update

Zscaler

Tue, Jun 30, 2026

Zscaler Ships June 2026 GovCloud Product Updates Across ZIA, ZPA, and ZDX

Zscaler released its June 2026 GovCloud updates spanning its platform. ZIA gained AI/ML threat-detection source visibility and expanded DLP controls for generative AI usage; ZPA added IdP flexibility for dual-stack environments and a new Private Service Edge build. ZDX introduced device-health reporting, while Zero Trust Branch strengthened DNSSEC and FIPS 140-3 cryptography for federal compliance. Deception updates reduced false positives for cloud decoys.

Partnership

Cloudflare

Tue, Jun 30, 2026

Cloudflare Names Westcon-Comstor as EMEA Distributor

Cloudflare announced a new EMEA distribution partnership with Westcon-Comstor, making it an authorized distributor for Cloudflare's Connectivity Cloud and cybersecurity solutions across Europe, the Middle East, and Africa. The collaboration includes investment in professional services and a dedicated Cloudflare team, initially focused on DACH, the UK, France, Benelux, and Southern Europe, with gradual expansion planned through 2026 and 2027 to accelerate channel partner growth.

AWS Security Hub CSPM Launches AI Security Best Practices Standard

AWS launched an AI Security Best Practices standard for Security Hub CSPM, providing 31 automated controls to continuously assess AI workloads, including Amazon Bedrock, Bedrock AgentCore, and SageMaker, against security best practices. Controls cover network isolation, encryption, VPC placement, KMS key usage, private registries, and authorization. Findings flag deviations for rapid remediation, and the standard is available in all Security Hub CSPM regions, including GovCloud and China, with a 30-day free trial.

AWS Network Firewall Adds VisionHeight Managed Threat Intelligence Rules

AWS Network Firewall now supports two VisionHeight managed rule groups via AWS Marketplace: Zero-Day Threat Protection and Noisy Scanners and Tor Protection. The former blocks malicious IP infrastructure before it appears on public blocklists, while the latter reduces log noise by blocking Tor exit nodes and

high-volume scanners to cut SOC and SIEM costs. Rules refresh daily and are available alongside offerings from other Marketplace sellers.

Amazon GameLift Servers Adds DDoS Protection SDKs for C# and Unity

AWS announced DDoS Protection client SDKs for C# and Unity in Amazon GameLift Servers, safeguarding session-based multiplayer traffic. The service co-locates a relay network with game servers and uses access-token authentication to admit only authorized traffic, providing proactive UDP-based protection with negligible latency and per-player traffic limits. It comes at no additional cost and expands existing C++ and Unreal Engine support across multiple regions.

AWS

Tue, Jun 30, 2026

AWS WAF Now Protects Amazon Bedrock AgentCore Gateway

AWS WAF is now generally available for Amazon Bedrock AgentCore Gateway. Enterprises can attach a WAF protection pack at the gateway level to enforce IP-based access controls, rate-based throttling, and AWS Managed Rule Groups, including Bot Control, across all downstream agents and integrations behind the gateway. The integration centralizes security configuration and is available in all regions where both AWS WAF and Bedrock AgentCore Gateway operate.

Research Report

Akamai

Tue, Jun 30, 2026

Akamai Survey: AI Adoption Outpacing Security Readiness Among Indian Enterprises

At its 2026 Partner Summit in India, Akamai released survey findings showing AI adoption is outpacing security readiness. Seventy-nine percent of respondents cited API attacks as a top concern, 42% pointed to evolving attack techniques as their biggest challenge, and only 17% felt very well prepared for AI-related risks. Data privacy and leakage topped AI risks at 70%. Akamai urged stronger governance and data protection as attack surfaces expand.

Security Advisory

Citrix (NetScaler)

Tue, Jun 30, 2026

Citrix Patches Six NetScaler ADC and Gateway Vulnerabilities, Including 'HTTP/2 Bomb'

Citrix issued security updates for NetScaler ADC and NetScaler Gateway fixing six vulnerabilities, including a high-severity memory-disclosure flaw (CVE-2026-8451) tied to SAML request parsing, echoing the CitrixBleed class, and a new 'HTTP/2 Bomb' denial-of-service bug. Severity ranges from CVSS 6.9 to 8.8. Citrix credited JPMorgan Chase, watchTower, and others, urging administrators to upgrade to patched builds and apply configuration changes such as adjusting the HTTP/2 small-window timeout.

Partnership

HPE / Juniper Networks

Tue, Jun 30, 2026

ScanSource Expands HPE Networking Partnership to Include HPE Juniper Networking

ScanSource announced an expanded HPE Networking partnership that now includes HPE Juniper Networking, combining HPE and Juniper portfolios for networking, cybersecurity, and AI-native enterprise solutions. Through ScanSource Launch Point, HPE's go-to-market efforts gain tailored channel programs reaching VARs, MSPs, and ISVs. The collaboration enables an AI-enabled cloud platform for automating and optimizing wireless, wired, and SD-WAN networks, extending HPE Juniper Networking's reach across ScanSource's partner ecosystem.
